

# COMPUTER WHIZ 2

**Fourth Edition**

# **Chapter 1 – Uses of Computers**

**Uses of Computers**

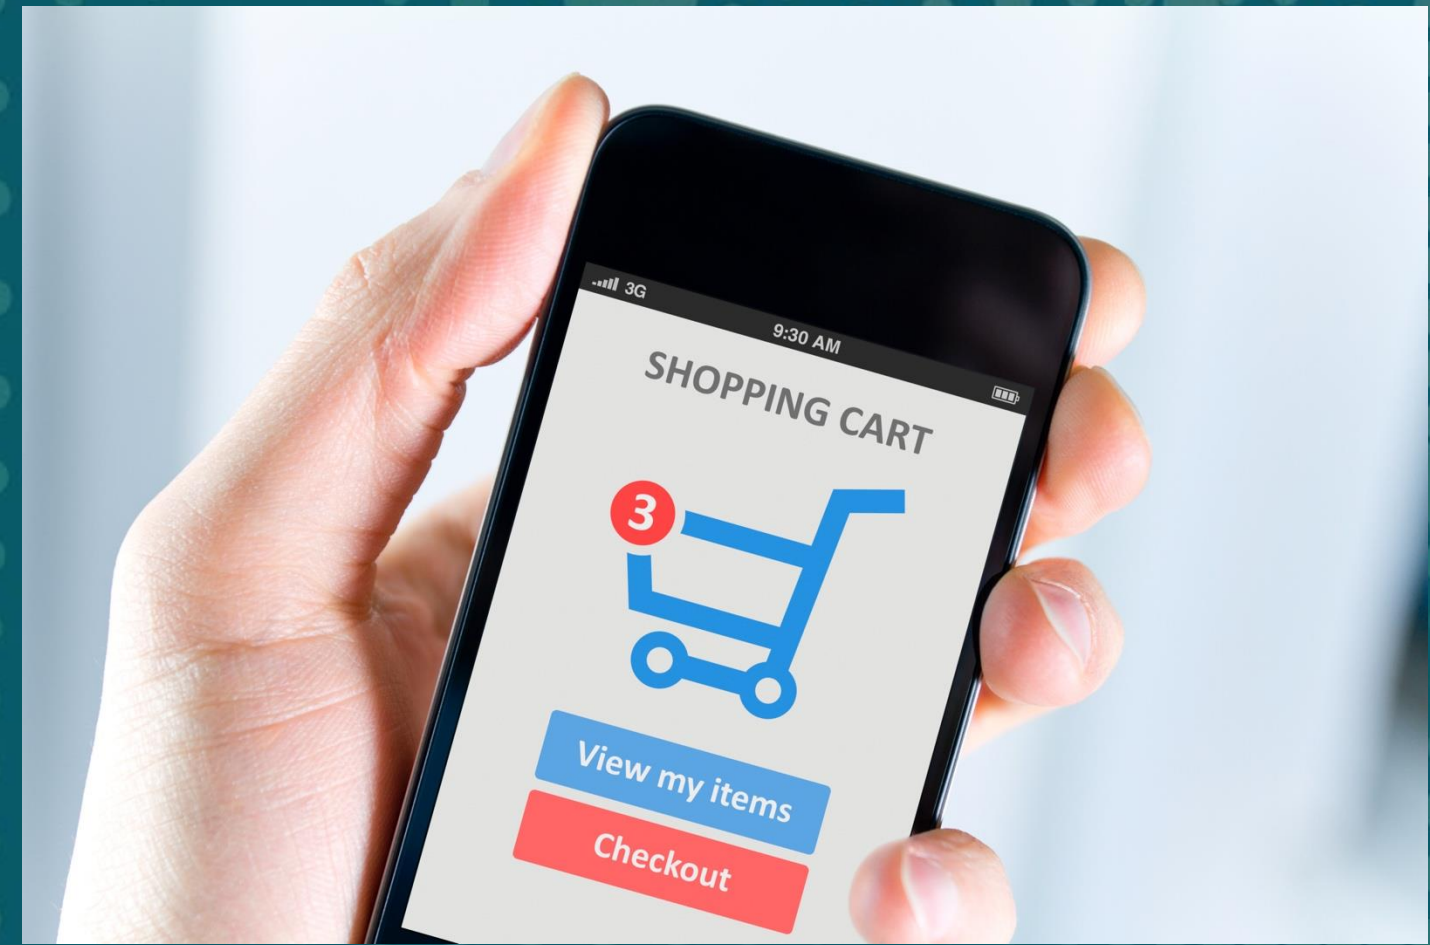

**Book page no. 1-8**

# PERSONAL USE

- Computers are essential for personal tasks such as browsing the Internet, talking to friends and family, booking a ride, online shopping, and entertainment like watching movies and playing games.

# EDUCATION

- Students can learn online, find information for their projects, and create fun presentations.
- They also use computers to play educational games, watch videos that teach new things, and talk to friends and teachers through video calls.

# BUSINESS

•Businesses rely on computers for various operations including data management, communication, accounting, and marketing.

•They help keep track of important information and talk to people through emails and video calls.

•Computers are used to count money and make sure everything is correct.

•They also help businesses tell people about their products through ads and websites.

•Computers make work faster and easier, helping businesses do a better job.

# HEALTHCARE

- In healthcare, computers are used for patient records management, diagnostic tools, and research.
- They help doctors and nurses keep track of patient records, making it easier to find information quickly.
- Computers are also used for diagnostic tools, like X-rays and MRIs, which help doctors see inside the body.
- Computers are also used in research to find new treatments and medicines.

# SCIENCE AND RESEARCH

- Scientists use computers to look up information, do experiments, and make cool pictures and graphs to show their results.
- Computers can also help them talk to other scientists worldwide and share their discoveries. This makes it easier for scientists to learn new things and solve problems together.
- Scientists use computers to control robots and other machines that help them do their work.
- They also use computers to study the stars, weather, and even animals.
