I. Selection of work and pacing

Class VI in the English National Curriculum is the final year of Key Stage 2, often known as Top Juniors. In school systems that follow this model, all the students will have been promoted from within the same school’s Class V and their mathematical background and experience will be known.

However, in many school systems, Class VI is the first year of secondary education, into which the students will have been admitted from many primary schools, with a much greater variety of previous mathematical experience.

*International Secondary Maths 6* attempts to address both of these situations. Very little previous knowledge is assumed. Most topics are introduced as though the students have not met them before. Even if they have covered the work before, they may have forgotten it, or need reminders. This has resulted in quite a large book. The teacher must use discretion about pacing. Knowing your students and adjusting the pace accordingly is an important part of professionalism. Good students who have been well taught previously may be able to skip some exercises, or use them as revision assignments without further teacher input. Some guidance about pacing is given in this Guide, chapter by chapter.

II. Integrated mathematics

This textbook series exploits connections between the different branches of mathematics. It may be neat and logical to do arithmetic first, then algebra, then geometry and data handling, but children do not learn best with this sequencing. Some more modern topics may involve two or more of these simultaneously. Wherever possible, links to other branches of mathematics should be pointed out to the students. Some advice on this is given chapter by chapter under the heading of Objectives in Lesson Planning.

III. Lesson planning

Keeping in mind what is written above about knowing your students’ previous experience, and adjusting the pace accordingly, it is not possible for a good lesson plan to be written by anyone other than the subject teacher.

However, in this Guide, suggestions have been made under various headings, which may assist teachers in writing their own plans in whatever format is required by their respective management teams.
**Objectives**
- General objectives
- Specific objectives
These are student-focused, i.e. they answer the question of what it is that we hope the students should be able to do and to know by the end of the lesson.

**Method**
Also known as strategy, procedure, or techniques, these are teacher focused, i.e. they answer the question of what it is that the teacher will do to enable the students' learning.

**Resources**
These are materials that are required in addition to the textbook. This Guide contains photocopiable sheets to supplement the textbook, but other items will be needed from time to time.

**Assignment**
Advice about how to use the exercises: homework, classwork, diagnostic, revision, etc.

**Vocabulary**
Keywords

**IV. Bloom's Taxonomy**
It has been standard teacher training for many years now to use Bloom's Taxonomy to explain the hierarchy of cognitive skills. This is helpful in writing objectives for lesson plans, but mathematical skills often involve a number of levels simultaneously. Here is a simplified version that may be of practical use to teachers aiming to expose their students to the higher levels of cognitive activity:

**Basics:** Remember → Understand → Apply

**Higher:** Analyse → Create → Evaluate

In the Basics, students learn (memorize) facts until they can Remember (recall), Understand (explain, give examples, answer routine questions) and Apply (use the facts in standard situations). For Higher skills, students deduce, distinguish, construct, organize, plan, modify, develop, draw relevant diagrams, etc. when faced with a new situation. These Higher skills collectively may be termed *problem-solving*. The textbook exercises contain material at both the Basic and Higher levels. When selecting assignments, keep these levels in mind. All must be fully competent in Basic level skills; as many as possible should be challenged to exercise the Higher level problem-solving skills. Higher level skills can often be developed rapidly through group work. Advice is given on this in the relevant chapters in this Guide.

V. The Exercises
Each chapter of the book has exercises coded as follow:
A, B, C, etc. following each section of the chapter
M—a miscellaneous exercise on all sections of a chapter (if there are multiple sections)
X—a short, challenging exercise at the end of each chapter, usually involving Higher levels of
cognitive skills, for the more talented students only.
Revision Exercises at regular intervals contain material tackled recently and material that ought
to have been covered in primary classes. They are not graded: some questions may be answered
immediately; others will require deeper thought. This is deliberate: it is more motivating for
students. Careful teachers may use these diagnostically to identify weak points in students’
knowledge.
VI. Useful Sheets
Photocopiable material is available as follows:
Right-Angled Triangles (3 : 4 : 5)
Right-Angled Triangles (3 : 3 : 3\sqrt{2})
Coordinate Grid
Nets for Cube and Pyramid (triangular base)
Net for Cuboid
Nets for Triangular Prism and Trapezoidal Prism
Net for Pyramid (square base)
Spotty paper—Square
Spotty paper—Triangular
Linear Scales
Symmetry (EX 24A)

</table>
If probability has been studied previously, it would probably have been explained in fractional terms, e.g. the chance of a 3 with one roll of a dice is 1 out of 6, i.e. $\frac{1}{6}$.

This chapter introduces the concept of a scale of probability with a precise range of values from 0 to 1.

In oral work in class, brighter students will realise that there are many events said to be impossible that could just possibly happen, having a probability close to zero. Similarly, for almost certain events, probabilities could be just less than 1.

Estimating where on a scale of probability an event should be placed is an excellent whole class activity involving Higher level skills. (See Bloom’s Taxonomy in the Introduction.)

**LESSON PLANNING**

**Objectives**

**General**
1. To understand that probability is measured on a scale from 0 to 1
2. To calculate probabilities of simple events

**Specific**
1. (Basic) To identify the correct position on the probability scale of simply defined events
   (Higher) To estimate the position for less clearly defined events
2. To write probabilities as fractions or decimals as appropriate
3. To use the scale of probability to place correctly and in order the likelihood of certain events happening

**Pacing**
3 lessons and 1 homework assignment

**Links**
Fractions, decimals

**Method**
Oral lesson opening: “Tell me something that is impossible.”
Keywords defined—lots of examples
Draw the scale of probability
Estimate location of events (e.g. I will die tonight!)
Examples of calculating probability (e.g. balls in bag, numbers on dice, etc.)
Recap key facts, i.e. scale of probability and keywords, at start of subsequent lessons.
Use exercises.

**Resources**
Real dice and pointers (if available) can be used in experiments, but they could be confusing owing to the variability in experimental probability experiments.
However, a large dice can be used to demonstrate (by symmetry) that each face is equally likely to show up when rolled. Real balls in bags can be used to show that to calculate probability correctly they have to be equal in size “to make it fair”.

**Assignments**

Exercise 1B has more words and requires higher level skills in general than Exercise 1A.
Exercise 1X is only for students who complete all of 1A and 1B correctly.
Exercise 1B #1-5 is suggested as a homework assignment.

**Vocabulary**

scale of probability
certain, impossible, almost certain, nearly impossible
likely, unlikely, equally likely

**ANSWERS**

**Exercises**

    b) \(\frac{5}{18}\)  
    c) \(\frac{2}{9}\)
This chapter contains a lot of exercise material but it should not take long to complete. For most students it will be revision. However, the focus should be on the “write/write down” methods rather than the vertical column paper and pencil method. This builds an instinctive feel for numbers, i.e. true numeracy, and has enduring value.

LEsson planning

Objectives

General  To be able to add numbers using appropriate mental and formal techniques

Specific  1. To be able to add quickly and accurately pairs of 2-digit whole numbers, pairs of 2-digit multiples of 10, pairs of 2-digit decimals, writing down the answers
       2. To recognise pairs of 1 or 2 decimal places (d.p.) decimals that total exactly 1
       3. To use the “round off and adjust” method to add a number close to a whole number
       4. To use standard vertical alignment on paper to add more difficult lists of numbers
       5. (Higher) To select appropriate techniques to solve word problems

Pacing  As fast as students can handle it. They ought to have covered these techniques previously, but may be a little rusty. 3 lessons maximum.

Links  Units (used in EX 2G)

Method  Use whole class oral session diagnostically for the fast addition techniques. Plan according to feedback. (You may find that only the vertical alignment method on paper is known.) Stress the fast addition techniques. Insist on (no shown working) “write/write down” answers only. Obviously, no calculators are allowed here. Use Exercises. 2A to D thoroughly.
       EX 2F is routine
       EX 2G: although choice of methods is allowed, encourage “write/write down” answers.

Resources  None

Assignments  EX 2E may be used for homework. It may also be used competitively, timed. (5s added for each incorrect answer)
       EX 2G is best done in class, students working in pairs. (This should not be skipped.)
       EX 2M #1–5 suitable for homework. Students finishing ahead of the rest may be directed to EX 2X.
Vocabulary
write/write down (implies no working required)
digits
align
columns
add, more, total

ANSWERS
Exercises
EX 2A

1. a) 58       b) 94       c) 56       d) 70
2. a) 100     b) 83       c) 49       d) 88

**EX 2G**

1. Yasmin is 1.39 m tall now.
2. The ladder is 4 m long.
3. The cloth is 4.11 m long.
4. Zachary’s line was 9.4 cm long.
5. There is 0.7 l of mixed juice.
6. Total score of Cyrus was 21.1 points.
7. Today’s temperature was 42.5 °C.
8. The weight of the kitten now is 1.08 kg.
9. Bilal’s time today was 39.66 s.
10. The total weight of the water and cake ingredients is 0.75 kg.
### EX 2M

1. a) 80  
   b) 67  
   c) 1590  
   d) 15.9  

2. a) 1  
   b) 12.8  
   c) 12.1  
   d) 1.20 (or 1.2)  

3. a) 16.34  
   b) 117  
   c) 780  
   d) 1740  

4. a) 1.31  
   b) 1  
   c) 15.4  
   d) 11.6  

5. a) 1.85  
   b) 13.48  
   c) 100  
   d) 1040  

6. a) 1290  
   b) 1230  
   c) 1.276  
   d) 944.355  

7. a) 19.4  
   b) 1.77  
   c) 1.154  
   d) 11.85  

8. a) 84.49  
   b) 15.59  
   c) 13.975  
   d) 982  

9. a) The fence is 50.8 m long now.  
   b) Mr Khan's baggage weighs 46.3 kg.  
   c) The daytime temperature is 28.2 °C  
   d) It took 46 s to cook the food properly.  

10. a) 0.375 l of drink is made.  
    b) 1.25 l of orange paint is made.  
    c) The total weight is 18.7 kg.  
    d) The chain is 12.59 m long now.  

### EX 2X

1. a) 11800  
   b) 185.3  
   c) 173  
   d) 27.1  

2. a) 803.17  
   b) 19.665  
   c) 369.047  
   d) 11.317  

3. a) 2.562 m  
   b) 2.77 l  
   c) 7.977 kg  
   d) 27.02 km
Chapter 3

Areas and Perimeters

The meat of this chapter is EX 3B, compound shapes formed from rectangles. Most students may already know the length × width formula for the area of a rectangle. However, the danger is that this formula may be applied mindlessly to other shapes and confused with the concept of area in general. Ensure that units are correctly expressed. Avoid obsolete notations such as sq. cm. Avoid full stops. In modern notation unit symbols are not regarded as abbreviations, so full stops are incorrect (unless at the end of a sentence). If students are shown correct notation from the start, they will quickly use it.

LESSON PLANNING

Objectives

General To calculate areas and perimeters of rectangles and shapes formed by combining rectangles

Specific 1. To calculate the area and perimeter of a rectangle with given sides
2. To calculate the length or width of a rectangle given its area and one dimension
3. To recognise that a square is just a special type of a rectangle
4. To select appropriate units of area (from mm², cm², m², km²) according to the situation
5. To express units of area and perimeter correctly
6. To understand that the areas of other shapes are not calculated by the formula length × width

Pacing Depending upon previous knowledge, 3 lessons + 2 homeworks

Links Units

Geography of Pakistan and other countries

Method

Demonstrate, using plenty of rectangular arrays of squares counted in rows and columns, to make the length × width rule evident.
Show some other shapes to emphasize that length × width only works for areas of rectangles.
The perimeter concept (it's a distance) can be emphasized by having a child stride around the boundary of the classroom or a chalked shape on the floor, thus contrasting it with area. (It’s a quantity of space.)
Explain units. Perimeter is a distance (e.g. cm). Area measures the space within given boundaries (e.g. length × width = cm × cm = cm²).
Resources
Rectangular arrays (e.g. on everyday objects such as window jalis)

Assignments
EX 3A as revision, with the briefest of introductions, may be set as homework.
EX 3B best for classwork, to ensure that diagrams and working are shown clearly.
EX 3C and 3M include some Higher level skills.
EX 3X has challenging questions for fast finishers.

Vocabulary
area, length, width
perimeter, distance

ANSWERS

Exercises
EX 3A
1. a) 10 cm²  b) 9 cm²  c) 24 cm²  d) 15 cm²
2. a) 14 cm  b) 12 cm  c) 20 cm  d) 16 cm
3. a) 28 cm²  b) 4 cm²  c) 48 cm²  d) 20 cm²
4. a) 22 cm  b) 8 cm  c) 28 cm  d) 18 cm
5. a) 24 cm²  b) 36 cm²  c) 25 cm²  d) 30 mm²
6. a) 63 cm²  b) 56 mm²  c) 40 cm²  d) 90 mm²
7. a) 32 cm  b) 30 mm  c) 28 cm  d) 38 mm
8. 3 cm
9. 12 mm
10. 20 cm

EX 3B
1. a) A 12, B 4, total 16 cm²  b) 18 cm
2. a) A 18, B 6, total 24 cm²  b) 22 cm
3. a) A 1, B 6, C 7, total 14 cm²  b) 22 cm
4. a) A 2, B 15, total 17 cm²  b) 20 cm
5. a) 20 cm²  b) 22 cm
6. a) 14.5 cm²  b) 25 cm
7. a) 133 cm²  b) 52 cm
8. 19.5 cm²
9. 28 cm
10. a) 62 cm²  b) 6 cm²  c) 56 cm²
**EX 3C**

1. a) cm²  
   b) m²  
   c) km²  
   d) mm²  
2. a) m  
   b) m²  
   c) m²  
   d) m  
3. 2.5  
4. b)  
5. a) 320 m²  
   b) 360 m²  
   c) 350 m². Best value is (b)  
6. a) 80 cm²  
   b) 8000 mm²  
7. Northern Ireland, Wales, Scotland, England  
8. 1 700 000 km²  
9. a) 271.5 cm  
   b) 4 m²  
   c) 6 km²  
   d) 5.5 km  
10. 144 000 km²  

**EX 3M**

1. a) 27 cm²  
   b) 49 cm²  
   c) 125 cm²  
   d) 1800 cm²  
2. a) 32 mm²  
   b) 30 cm²  
   c) 60 cm²  
   d) 80 mm²  
3. a) 25 mm  
   b) 2.5 cm  
4. a) A 18, B 3, total 21 cm²  
   b) 20 cm  
5. a) 24 cm²  
   b) 26 cm  
6. 9 cm²  
7. 49 cm²  
8. a) m  
   b) m²  
   c) m²  
   d) cm  
9. a) cm²  
   b) km²  
   c) m²  
   d) mm²  
10. a) Balochistan, Punjab, Sindh, KP  
    b) 29 000 km²  

**EX 3X**

1. a) 38 cm  
   b) 81.25 cm²  
2. a) 3 702 000 000 m²  
   b) 1 409 140 000 000 cm²  
   c) 4 000 000 000 000 000 mm²  
   d) avoids too many zeros  
3. 42 cm²
Chapter 4
Subtraction

The techniques to be applied in this chapter are similar to those in Chapter 2 for addition. However, most students will find mental methods for fast subtraction more difficult than for addition. Hence, more time will be needed.

**LESSON PLANNING**

**Objectives**

<table>
<thead>
<tr>
<th>General</th>
<th>To be able to subtract numbers using appropriate mental and formal techniques</th>
</tr>
</thead>
</table>
| Specific | 1. To be able to subtract quickly and accurately pairs of 2-digit whole numbers, pairs of 2-digit multiples of 10, pairs of 2-digit decimals, writing down the answers  
2. To be able to write down subtractions from 1 or 10  
3. To use the “round off and adjust” method to subtract numbers close to a whole number  
4. To use standard vertical alignment on paper to subtract more difficult numbers  
5. (Higher) To select the most suitable strategy for subtraction to solve word problems |

**Pacing**

4 or 5 lessons

**Links**

Addition in chapter 2

**Method**

Lots of oral work with the whole class  
Stress the fast mental techniques.  
Ensure the bridging strategy is well explained by using a number line.  
Use the Exercises.

**Resources**

Number line (with tenths marked): may be drawn on the board but a permanent one above the board is a great visual aid

**Assignments**

Classwork #1–7, homework #8–10, all exercises

**Vocabulary**

write/write down  
digits  
align, vertical column  
subtract, left, remaining, fall, less, lower

EX 4G
1. There were 56 cherries left.
2. There were 670 chairs not broken.
3. The plank was 1.78 m long after cutting.
4. There was 1.5 m² of cloth left over.
5. 1.25 l of water was left in the bottle.
6. The temperature fell 12.8 degrees.
7. The probability of not winning is 0.82.
8. Bilal improved by 0.41 s.
9. Ayesha's average was lower by 6.8 marks.
10. Daniyal managed to watch 4.8 h of TV.

EX 4M
1. a) 2.2 b) 0.61 c) 32 d) 1.9
2. a) 440 b) 9.22 c) 0.6 d) 0.6
3. a) 2.2 b) 2.8 c) 3.11 d) 38.22

7. a) 3.1 b) 0.487 c) 12.65 d) 0.49
8. a) 29.97 b) 0.01 c) 160 d) 0.86
9. a) Mr Khan’s baggage was overweight by 12.4 kg.
b) The bag he left behind weighed 15.1 kg.
10. a) The string is 6.35 m long.
   b) Kamal made 1.7 l of orange paint.
   c) Yasmin scored 60 points fewer today.
   d) The probability of not getting double 6 is about 0.97

EX 4X

1. a) 2600      b) 19000      c) 230.9      d) 6.4
2. a) 76.53     b) 460.42    c) 4.67      d) 0.0486
3. a) 999.999 m b) 4.995 l  c) 997.5 kg
Chapter 5

Revision Exercises

Exercises 5A, 5B up to #7 are for consolidation of Chapters 1 to 4. From 5B #8 to 5D, questions are included that a good primary scheme should have covered. These may be used diagnostically. If students are not familiar with all of these topics, it would be useful for the teacher to know. However, there is no need to panic as all of them will be repeated at some stage later in this scheme.

LESSON PLANNING

Objectives

General
1. To be able to answer miscellaneous questions based on Chapters 1–4
2. To assess whether prior knowledge of topics

Specific
1. To be able to answer “write/write down” questions quickly and accurately
2. To be able to answer harder questions (showing working) correctly
3. To complete all set work
4. To discuss difficulties and explain to a classmate how a problem is solved

Pacing
Depends very much on the students: there could be a lot of variability. 3 lessons?

Method
Give general pep talk on the importance of practice. Set EX 5A. Allow working in pairs. Give out some answers at an early stage to provide confidence (Students mark their own work.) Use EX 5B for homework (#1–7 only). Rest of the exercises may be used as time permits.

Assignments
All should complete up to #7 of EX 5B. As much of the remaining material should be completed as time permits.
As usual, EX 5X contains challenging questions.

Vocabulary
Probability, random
write/write down
add, subtract, difference
length, width, rectangle, area, perimeter
fraction, mixed number, number line, percentage, sequence
arrow diagram, input, output, formula
set, even, odd, multiples, primes
analogue, digital
proportion
faces, edges, vertices
estimates
angle
### ANSWERS

**Exercises**

**EX 5A**

1. a) \( \frac{3}{10} \)  
   b) \( \frac{1}{2} \)  
   c) \( \frac{4}{5} \)  
   d) 0

2. a) white  
   b) blue  
   c) red

3. a) 70  
   b) 112  
   c) 870  
   d) 610

4. a) 10.8  
   b) 16.4  
   c) 0.99  
   d) 1

5. a) 11.2  
   b) 13.1  
   c) 8.5  
   d) 6.8

6. a) 6.5  
   b) 5.9  
   c) 11.7  
   d) 7.6

7. a) 1.045  
   b) 90.3  
   c) 1.975  
   d) 8.704

8. The width of the carpet is 3.18 m.

9. a) 9 m²  
   b) 13 m²  
   c) 19 m; Yes

10. a) 2.36 cm² or 236 mm²  
     b) 6.6 cm or 66 mm

**EX 5B**

1. a) 22  
   b) 13  
   c) 270  
   d) 80

2. a) 2.1  
   b) 3.8  
   c) 0.22  
   d) 0.34

3. a) 5.7  
   b) 4.8  
   c) 1.6  
   d) 2.9

4. a) 1.4  
   b) 4.6  
   c) 2.1  
   d) 0.2

5. a) 0.053  
   b) 1.179  
   c) 2.548  
   d) 2.16

6. 0.86

7. This was 1.64 m lower.

8. a) mm  
    b) m  
    c) km²  
    d) cm

9. a) \( -\frac{3}{5} \)  
    b) \( \frac{1}{5} \)  
    c) \( 1\frac{4}{5} \)  
    d) \( 2\frac{2}{5} \)

10. 2.44s

**EX 5C**

1. 25, 21, 17, 13, 9, 5, 1, –3, –7, –11

2. a) 7.5  
   b) 4  
   c) 6  
   d) \( n + 1.2 \)

3. a) 2, 16, 90, 100, 8  
    b) 17, 3, 15, 25  
    c) 15, 90, 100, 25  
    d) 17, 3, 2

4. a) the red parcel  
    b) 30 g
5. a) 11  b) 5  c) 2  d) 14
6. 4 mm, 5 cm, 80 mm, 80 cm, 6 m, 7 km
7. a) $\frac{1}{5}$  b) $\frac{1}{2}$  c) 5
8. a) 6  b) 12  c) 8
9. a) 210; 213.44  b) 260; 265.81  c) 300; 283.497968  d) 70; 67.97101449
10. a) 16 > −6  b) −16 < 6  c) 10 + 6 = 7 + 9  d) −9 < −7

**EX 5D**

1. a) 6  b) 5.4  c) 9.2  d) $52\frac{2}{3}$
2. [The line should be accurate to 1 mm.]
3. a) $\frac{3}{100}$; 0.03  b) 75%; $\frac{3}{4}$  c) 40%; 0.4  d) Rs 200
4. a) 42  b) 132  c) 1440  d) 5800
5. a) 315  b) 462  c) 714  d) 1281
6. a) 150°  b) 40°  c) 130°  d) 20°
7. a) 64805  b) 601043  c) twenty-five thousand, two hundred and twelve  d) two hundred and fifty-six thousand, one hundred and ninety-eight
8. a) 0.5 m  b) 1.87 s  c) 9 km²  d) 0
9. a) 100  b) 100  c) 1  d) 1
10. $\frac{2}{3}$ (= $\frac{8}{12}$), $\frac{3}{4}$ (= $\frac{9}{12}$), $1\frac{5}{12}$, $1\frac{1}{2}$ (= $1\frac{6}{12}$), $2\frac{1}{6}$, $3\frac{1}{12}$

**EX 5X**

1. a) 10  b) 1.6  c) 0.54  d) 22
2. 940
3. a) Rs 1  b) [Enter $0.05 \times 0.05 \times 0.05 \times 8000$]
Chapter 6
Arrow Diagrams

Students will almost certainly have met arrow diagrams previously. If so, the first exercises, 6A, B, C, will be straightforward, although the numbers may be challenging for some with its variety of positive and negative integers, fractions, decimals, and mixed numbers. The focus of the chapter is to introduce serious algebraic thinking.

LESSON PLANNING

Objectives

<th>General</th>
<th>To understand and to use simple linear algebraic expressions</th>
</tr>
</thead>
</table>
| Specific | 1. To calculate inputs, outputs, or operations from information given on an arrow diagram  
2. To use formulas for linear algebraic expressions correctly in arrow diagrams  
3. To avoid use of x or ÷ in algebraic expressions, and to use brackets correctly  
4. To distinguish correctly the difference in meaning of similar expressions (e.g. $\frac{n+2}{3}$ and $\frac{n}{3} + 2$) |

Pacing

EX 6A and 6B very quickly
Take time over inverse operation (“reversing the flow”), and EX 6C.
Key exercises 6D and 6M (4 lessons)

Links

All the fast addition and subtraction methods in chapters 2 and 4.
Fractions, decimals, negative numbers

Method

A lot depends upon prior knowledge. The text assumes that students will know the meaning of $n + 2$, $n - 2$, $2n$, $\frac{n}{3}$, etc., but this may need to be explained. This is emphatically NOT the time for formal definitions of variable, constant, etc.
Board work, using single operation diagrams, and then double operation diagrams, such as those in the text, should be continued until students are answering confidently.
The aim is for students to see the correct stages when confronted with a linear algebraic expression. For example, when students see $3n + 2$, they should think
FIRST multiply by 3  
THEN add 2
But when they see $3(n + 2)$ they should think
FIRST add 2  
THEN multiply by 3
This kind of thinking is vital for later work in algebra. Use the words “inverse operation” a lot, when “reversing the flow”.

Assignments
EX 6B is good for homework.

Vocabulary
input, output, operation, inverse operation
“reversing the flow”
formula
arrow diagram, double arrow diagram

ANSWERS

Exercises

EX 6A
1. a) 8.1  
   b) 9.6  
   c) 11  
   d) –0.9
2. a) \( \frac{1}{3} \)  
   b) 0  
   c) \( 4 \frac{2}{3} \)  
   d) \( \frac{1}{6} \)
3. a) \( 7 \frac{1}{2} \)  
   b) \( 4 \frac{1}{2} \)  
   c) \( -1 \frac{1}{2} \)  
   d) 6
4. a) 6.21  
   b) 2.31  
   c) 0.97  
   d) 1.14
5. a) 1300  
   b) 2200  
   c) 700  
   d) –200
6. a) 30  
   b) 3  
   c) –12  
   d) 6
7. a) \( \frac{1}{2} \)  
   b) \( -\frac{1}{2} \)  
   c) –4  
   d) 265
8. a) 30  
   b) 5.5  
   c) 250  
   d) 2
9. \( \times 2 \)
10. a) 74  
    b) 2500  
    c) 107  
    d) 5.5

EX 6B
1. a) 7  
   b) 17  
   c) 2  
   d) 3
2. a) 3  
   b) 2.6  
   c) 0  
   d) \( 14 \frac{1}{2} \)
3. a) 4  
   b) 1  
   c) 3.4  
   d) 501.5
4. a) –4  
   b) 3  
   c) 9  
   d) 3.031
5. a) 120  
   b) 32  
   c) 4200  
   d) 0.3
6. a) 2400  
   b) 1000  
   c) 2  
   d) 15
7. \[ \times 3 \rightarrow \times 1000 \]

\[
\begin{array}{ccc}
5 & 15 & 15000 \\
1 & 3 & 3000 \\
2 & 6 & 6000 \\
7 & 21 & 21000 \\
\end{array}
\]

8. \[ \div 2 \rightarrow \div 100 \]

\[
\begin{array}{ccc}
1200 & 600 & 6 \\
66 & 33 & 0.33 \\
1000 & 500 & 5 \\
8 & 4 & 0.04 \\
\end{array}
\]

9. a) 80  
   b) 280  
   c) 124  
   d) 180

10 a) 40  
    b) 0.3  
    c) 7  
    d) 0.2

**EX 6C**

1. \[ \div 2 \rightarrow -1 \]

\[
\begin{array}{ccc}
a) 3 & b) 6 & c) 1 & d) 1.5 \\
\end{array}
\]

2. \[ -5 \rightarrow \times 10 \]

\[
\begin{array}{ccc}
a) 1 & b) 2 & c) 5 & d) 15 \\
\end{array}
\]

3. a) 9  
   b) 27  
   c) 13\frac{1}{2}  
   d) 10

5. a) 30  
   b) 6  
   c) 30  
   d) 2.2

6. a) 1  
   b) 3  
   c) 5  
   d) 0.1

7. a) -3  
   b) 1.1  
   c) 0.5  
   d) 0

8. a) 1300  
   b) 14  
   c) -700  
   d) 0

9. a) 0.2  
   b) 4.2  
   c) 38.2  
   d) 11.2

10. a) 2  
    b) 1  
    c) 13  
    d) 50
EX 6D

1. \[ \begin{align*}
&n \rightarrow n \times 2 \rightarrow 2n \rightarrow 2n + 3
\end{align*} \]

2. \[ \begin{align*}
&t \rightarrow t \times 7 \rightarrow 7t \rightarrow 7t - 1
\end{align*} \]

3. \[ \begin{align*}
&x \rightarrow x - 1 \rightarrow x \times 2 \rightarrow 2(x - 1)
\end{align*} \]

4. a) 3 
   b) 8 
   c) 10 
   d) 35 
   e) 3y 
   f) 3y + 5

5. a) \( \frac{n}{2} + 5 \) 
   b) \( \frac{n + 2}{5} \) 
   c) 2n - 5 
   d) 5(n - 2)

6. a) 2(x + 1) 
   b) \( \frac{x - 1}{2} \) 
   c) 2x + 1 
   d) \( \frac{x}{2} - 1 \)

7. a) \[ \begin{align*}
&n \rightarrow n \times 2 \rightarrow 2n \rightarrow 2n - 7
\end{align*} \]
   b) \[ \begin{align*}
&n \rightarrow n \times 7 \rightarrow 7n \rightarrow 7n - 2
\end{align*} \]
   c) \[ \begin{align*}
&n \rightarrow n + 2 \rightarrow (n + 2) \times 7 \rightarrow 7(n + 2)
\end{align*} \]
   d) \[ \begin{align*}
&n \rightarrow n - 7 \rightarrow (n - 7) \times 2 \rightarrow 2(n - 7)
\end{align*} \]

8. a) \[ \begin{align*}
&n \rightarrow n \div 2 \rightarrow \frac{n}{2} \rightarrow \frac{n}{2} + 4
\end{align*} \]
   b) \[ \begin{align*}
&n \rightarrow n + 4 \rightarrow \frac{n + 4}{2} \rightarrow \frac{n + 4}{2} + 2
\end{align*} \]
   c) \[ \begin{align*}
&n \rightarrow n - 2 \rightarrow \frac{n - 2}{4} \rightarrow \frac{n - 2}{4} + 4
\end{align*} \]
   d) \[ \begin{align*}
&n \rightarrow n \div 4 \rightarrow \frac{n}{4} \rightarrow \frac{n}{4} - 2
\end{align*} \]

9. a) 10 
   b) 22 
   c) 2.3 
   d) 2

10. a) 9 
    b) 7 
    c) -1 
    d) 5
EX 6M

1. a) 6.18    b) 3.28    c) 0.3    d) 0.91
2. a) 15    b) 6.6    c) 750    d) 2 1/4
3. a) 10    b) 8.4    c) 0    d) 17
4. a) 1800    b) 100    c) 3    d) 8
5. a) 8    b) 0.43    c) 0.07    d) 0.03
6. a) 16    b) 40    c) 18    d) 21
7. a) 200    b) 16    c) -600    d) 0
8. \[ x \rightarrow 5 \rightarrow 5x \rightarrow -2 \rightarrow 5x - 2 \]
9. a) 3(n + 2)    b) \( \frac{n - 2}{3} \)    c) 2n + 3    d) \( \frac{n}{2} - 3 \)
10. a) 10.5    b) 4    c) \( \frac{1}{2} \)    d) 3

EX 6X

1. a) 1.3    b) 6.5    c) 500    d) 0.1034
2. a) 2(n + 1) - 6    b) 2n - 4
c) same outputs; 2(n + 1) - 6 = 2n - 4
3. 3(n + 2) - 1 = 3n + 5; other similar diagrams
This is another numeracy chapter, with the emphasis on mental methods. When estimating it is customary to round off to 1 significant figure (s.f.) unless instructed otherwise, or there is a simpler alternative. At this stage it will be sufficient to explain it by looking for the most valuable digit (i.e. the first non-zero digit on the left).

### LESSON PLANNING

**Objectives**

**General**
To be able to round off numbers (to given levels of accuracy) and use them in calculations and estimates

| Specific | 1. To be able to round off whole numbers to the nearest 10, 100, or 1000, and decimals to the nearest whole number, tenth, hundredth, or thousandth |
| 2. To be able to round off (to specified accuracy) after completing a calculation |
| 3. To use the “round off and adjust” method for near multiples of 10, 100, or 1000 |
| 4. To be able to find products of multiples of 10 mentally |
| 5. To be able to estimate answers by prior rounding off of the given numbers |

**Pacing**
3 or 4 lessons

**Method**
Rounding needs careful explanation leading to understanding. Do not rush to reach the “following-digit rule”.

- Taking the first text example, 18.6 to the nearest 10
  - Write down the nearest multiples of 10 on either side
  - 10  18.6  20
  - Which is nearer? 10 or 20?

- Similarly, with decimal examples, e.g.
  - 2.763 to 1 d.p.
  - 2.7  2.763  2.8
  - Which is nearer: 2.7 or 2.8?

- It will not be long before someone spots the halfway point at 2.75, leading to the “following-digit rule” stated in the text.

**Resources**
A number line, marked in tenths, is useful.

**Assignments**
The Exercises 7A and 7B can be completed very quickly. EX 7C and 7M are more challenging.
Vocabulary
- round off, adjust
- estimate
- decimal place (d.p.)
- most valuable digit

ANSWERS

Exercises

EX 7A

1. a) 2800  
   b) 31 400  
   c) 900  
   d) 2000
2. a) 21 000  
   b) 137 000  
   c) 8000  
   d) 10 000
3. a) 8  
   b) 8  
   c) 6  
   d) 15
4. a) 4140  
   b) 21 770  
   c) 60  
   d) 80
5. a) 7.4  
   b) 16.5  
   c) 2.9  
   d) 3.0
6. a) 14.6  
   b) 51.4  
   c) 64.2  
   d) 45.6
7. a) 1.17, 1.2  
   b) 0.34, 0.3  
   c) 7.22, 7.2  
   d) 0.24, 0.2
8. a) 0.8, 1  
   b) 4.5, 5  
   c) 3.4, 3  
   d) 103.02, 103
9. a) 11.11, 11.1  
   b) 2.55, 2.6  
   c) 1.122, 1.1  
   d) 0.018, 0.0

EX 7X

1. a) 24  b) –2  c) 30  d) 27

2. Estimated  Calculated
   a) 2600  2658.2
   b) 33  34.8205
   c) 600  609.201
   d) 1000  1043.263889

   Estimating gives good results

3. a) Estimate  = \((50 - 10 + 30 - 9) \times 8\)
             = 61 \times 8
             = 4800, much higher than Saira's answer

   b) She entered 5.49 instead of 54.9
**Chapter 8**

**Angles**

**Measuring and estimating**

Although students should have used protractors before, experience would indicate that few do it accurately. The two main errors are:

a) not getting the centre spot over the vertex and the baseline carefully on one of the arms of the angle: students rush the positioning.

b) reading the wrong scale

c) using blunt pencils.

Estimating (Higher level skill) should not be avoided.

**Reasoning**

Using three basic angle facts to calculate requires selection of appropriate method (Higher level skill). This is the beginning of learning about mathematical proof in a very simple context, so it is important.

**LESSON PLANNING**

**Objectives**

**General**

1. To be able to draw, measure, and estimate angles to a good standard of accuracy
2. To know some basic angle facts and use them to calculate other angles on a given diagram (not to scale)

**Specific**

1. To be able to draw and measure acute, right, and obtuse angles to an accuracy of ± 1°
2. To use the facts of 180° forming a straight line and 360° surrounding a point to calculate angles in diagrams
3. To know that the total of the three interior angles of a triangle is 180° and to use this to calculate other angles in diagrams
4. To be able to use letters to stand for missing angles and to find their values using intuitive reasoning

**Pacing**

4 lessons, 1 homework

**Links**

Factors (especially of 180)
The meaning of 3x, etc.

**Method**

Demonstrate drawing/measuring with large board protractor. Emphasize positioning carefully, and looking for zero on the arm so that the correct scale is read.
Before drawing have a mass pencil sharpening session. For geometry, H-rated pencils are better than HB. Pair working can be good: call out an angle, all draw it, then partner measures. Accuracy must be within ± 1°.
Call out both acute and obtuse angles.
EX 8A may be used for measuring.
EX 8B involves both drawing and estimating. Before setting this, go through the text showing equal division of 180°. (Estimates should be to ± 10°.)
The three angle facts stated in the text should be known already, to be revised only. However, many students forget the angle-sum of a triangle. A practical lesson can reinforce this. Give out prepared triangles, all different. (Sticky paper is ideal.) Students mark the internal angles with an angle arc, tear them off and stick them together on a straight line in their exercise books.
This shows that the angle-sum of a triangle is 180°.

It is recommended that using letters for missing angles, and associated pre-algebra, is not formally introduced. Just set EX 8C and see what happens!

| Assignments       | Any of the exercises, or parts, may be set as homework. EX 8M covers everything in the chapter. EX 8X (as usual) is especially challenging and is not for all. |

| Vocabulary        | draw, measure, estimate, protractor |
|-------------------| angles around a point               |
|                   | angles on a straight line           |
|                   | angles inside a triangle            |
|                   | acute, obtuse, right-angle          |

**ANSWERS**

**Exercises**

**EX 8A**

1. 41°
2. 30°
3. 102°
4. $118^\circ$
5. $91^\circ$
6. $37^\circ$
7. $54^\circ$
8. $16^\circ$
9. $43^\circ$
10. $60^\circ$

[Allow $1^\circ$ on either side.]

**EX 8B**
1. $a = 40, b = 45$
2. $a = 45, b = 30, c = 150$
7. a) $90^\circ$ b) $135^\circ$ c) $150^\circ$ d) $20^\circ$
8. a) right b) obtuse c) obtuse d) acute
9. a) acute b) obtuse c) acute d) obtuse

**EX 8C**
1. $a = 160, b = 140, c = 15, d = 8$ (angles on a straight line)
2. $a = 80, b = 135, c = 40, d = 39$ (angles around a point)
3. $a = 61, b = 90, c = 66, d = 60$ (angles in a triangle)
4. $a = 45, b = 50, c = 20, d = 30$
5. $a = 42, b = 70, c = 60, d = 77$
6. $a = 56, b = 118, c = 45, d = 87$
7. $x = 45, 44^\circ$ and $46^\circ$
8. $y = 60, 59^\circ$ and $121^\circ$
9. $30^\circ, 60^\circ, 90^\circ$, right-angled triangle
10. isosceles right-angled triangle

**EX 8M**
3. a) acute b) obtuse c) acute d) obtuse
4. $a = 50^\circ, b = 36^\circ, c = 144^\circ$
6. a) $32^\circ, 8^\circ$ b) $116^\circ, 94^\circ, 112^\circ$ c) 1 d) $280^\circ$
7. $a = 166$ b) $b = 145$, c) $c = 14$ d) $d = 51$
8. \( a = 60, b = 69, c = 14, d = 36 \)
9. \( x = 90^\circ, 95^\circ \text{ and } 85^\circ \)
10. \( 20^\circ, 40^\circ, \text{ and } 120^\circ \)

**EX 8X**

2. e) The angles inside a quadrilateral add up to 360°
3. 35°, 85°, 60° \((n = 40)\)
Chapter 9

Multiplication

This chapter deals with all methods for multiplication of whole numbers and decimals, without calculator, that are appropriate at this stage. Some of it will be revision, but the three strategies described in the text should be explicitly taught as these give students a real feel for how numbers work. For the same reason, encourage mental methods, resorting to the standard algorithms only when there is no alternative.

LESSON PLANNING

Objectives

General To be able to multiply whole numbers and decimals using suitable strategies (without calculator)

Specific 1. To be able to multiply whole numbers and decimals (up to 4 d.p.) by whole numbers (up to 100)
2. To be able to multiply by using the halving and doubling strategy where appropriate
3. To be able to multiply by using the rounding off and adjusting strategy where appropriate
4. To be able to multiply by using the changing the order strategy where appropriate
5. To be able to multiply two decimals, obtaining the correct number of d.p. in the answer
6. To select an appropriate strategy for multiplication without prompting, and to solve word problems

Pacing Approximately 4 lessons, 1 homework.

Method

Set EX 9A and 9B and use diagnostically.

The “three strategies” should be taught explicitly, with lots of examples. Avoid using the terms commutative, associative, and distributive: at this stage the strategies should be instinctive and not formally presented. EX 9C follows.

For the product of two decimals, emphasize (as in the text) that the total number of d.p. has to be preserved. For students who question the rule (all credit due!), use fractions to show why it works, e.g.

\[
3.4 \times 2.15 = \frac{34}{10} \times \frac{215}{100} = \frac{34 \times 215}{1000}
\]
So, we multiply 34 \times 215 and ensure that the answer has 3 d.p. (thousandths) Exercise 9D follows, and 9M where students have to choose the most appropriate method.

**ANSWERS**

**Exercises**

**EX 9A**

1. a) 410  
   b) 60,020  
   c) 1750  
   d) 90

2. a) 700  
   b) 1700  
   c) 185,600  
   d) 21,000

3. a) 6  
   b) 67.8  
   c) 2160  
   d) 1.5

4. a) 34.25  
   b) 8240  
   c) 1890  
   d) 43.5

5. a) 60  
   b) 9  
   c) 40  
   d) 2

6. a) 8.2  
   b) 75.6  
   c) 31.2  
   d) 43.5

7. a) 11.9  
   b) 18.4  
   c) 39.2  
   d) 4.2

8. a) 3.78  
   b) 601.04  
   c) 1554.7  
   d) 67.23

9. a) 51.70  
   b) 1247.6  
   c) 36.605  
   d) 2.592

10. a) 5.586  
    b) 31.71  
    c) 208.64  
    d) 1523.5

**EX 9B**

1. a) 6.46  
    b) 292.76  
    c) 218.5  
    d) 3100.8

2. a) 8.64  
    b) 83.46  
    c) 1051.5  
    d) 161.70

3. a) 164.25  
    b) 8.73  
    c) 2425.5  
    d) 48.6

4. a) 502.52  
    b) 1781.6  
    c) 207.4  
    d) 28.56

5. a) 243.1  
    b) 32.3  
    c) 17.85  
    d) 3.876

6. a) 73.47  
    b) 437.1  
    c) 597.99  
    d) 6.324

7. a) 8.4  
    b) 43.68  
    c) 3.51  
    d) 5436.6
8. a) 5  b) 490  c) 3023.3  d) 73.602  
9. a) 240.5  b) 90  c) 0.92  d) 54.81  
10. a) 164.7  b) 32.64  c) 269.8  d) 324.6  

EX 9C  
1. a) 40  b) 160  c) 51  d) 64  
2. a) 140  b) 4.3  c) 3.6  d) 11.2  
3. a) 336  b) 21.7  c) 49.2  d) 168.3  
4. a) 171  b) 174  c) 81.9  d) 345  
5. a) 13.05  b) 7.238  c) 21.6  d) 14.22  
6. a) 0.34  b) 195.5  c) 19.552  d) 8.43  
7. a) 105  b) 45  c) 12.3  d) 474  
8. a) 11.265  b) 92.92  c) 377.4  d) 62.3  
9. a) 53.2  b) 27  c) 7.2  d) 5.62  
10. a) 39  b) 21.3  c) 5.9  d) 3.6  

EX 9D  
1. a) 0.24  b) 0.14  c) 0.012  d) 0.30  
2. a) 6.615  b) 1.39  c) 0.0693  d) 0.0196  
3. a) 0.9372  b) 9.324  c) 84.13  d) 0.2409  
4. a) 0.018  b) 1.04  c) 0.0476  d) 20.12  
5. a) 0.159  b) 3.43  c) 0.0657  d) 3.776  
6. a) 2.134  b) 38.85  c) 19.598  d) 0.15893  
7. 0.468 m\(^2\) = 0.5 m\(^2\) (1d.p.)  
8. 3.686 m\(^2\) = 3.7 m\(^2\) (1d.p.)  
9. 59.1522 m\(^2\) = 59 m\(^2\) (nearest whole number)  
10. 8.33 \times 0.4 = 3.332 \text{L} = 3.3 \text{L} (1d.p.)  

EX 9M  
1. a) 9350  b) 1300  c) 99.5  d) 8340  
2. a) 8  b) 95.1  c) 64.8  d) 271.26  
3. a) 1456.4  b) 23.66  c) 506.88  d) 6945  
4. a) 3082.5  b) 624.24  c) 18.19  d) 915.12
5. a) 11.2  b) 220  c) 244.2  d) 504.6
6. a) 180  b) 13.2  c) 1575  d) 133
7. \(5 \times 7.8 \times 1.2 = 7.8 \times 6 = 46.8 \text{ km}^2\)
8. Rs 2989.76 = Rs 2990 (nearest rupee)
9. \(30 \times 6.5 \times 0.2 = 6.5 \times 6 = 39 \text{ m}^2\) (one side of the fence)
10. Rs 325.28 = Rs 325 (nearest rupee)

**EX 9X**

1. 0.5, 0.1, 0.05, 0.8, 0.3
   a) 0.05  b) 0.24  c) 0.005  d) 0.4
2. a) 2.09  b) 8.1  c) 777  d) 15.3
3. a) 64  b) 21  c) 428.7  d) 3986
These exercises cover the topics in chapters 1–9 of the text first, and then include general topics from a modern primary scheme, as follows:

- EX 10A #1–8 Revision from Chapter 1–9
- Thereafter, a mixture of old and new topics

**LESSON PLANNING**

**Objectives**

**General**

1. To be confident in answering questions on work covered in class (Chapters 1–9)
2. To discover if correct answers can be obtained on work not covered recently

**Specific**

1. To practise answering questions on work covered recently
2. To explore whether questions may be answered on topics that may not have been covered, or covered some time ago

**Pacing**

2 to 4 lessons, depending on use

**Method**

There are a number of options depending on how much use the teacher wants to make of the topics not covered in the text.

a) Set EX 10A #1–8 and “cherry pick” from the rest.
b) Set EX 10A #1–8 and then see how much further the students can manage.
c) As for (b) allow students to skip any question they do not understand. [This can be most informative diagnostically.]
d) Encourage students who can do a difficult question to explain it to the whole class.
e) Allow working in pairs or small groups.
f) Competitive group working
g) Timed exercise. When 3 (say) students have completed it, stop everyone and give out the answers for immediate feedback.
h) Use one of exercises as a mini-test under examination conditions.
i) If there is plenty of time, just get everyone to work through all the exercises systematically.

**Assignments**

All should complete EX 10A #1–8, and as much of the rest as time permits. Any selection may be used for homework.
Vocabulary
modal group
sequence, formula
true, false, odd, even, prime, multiples
symmetry
cancel down fractions, simplest equivalents
anticlockwise, coordinates
scalene, isosceles, equilateral

ANSWERS
Exercises

EX 10A
1. a) 8  b) 19  c) 5  d) 0.1
2. a) 10.01; 10.0  b) 50.47; 50.5  
c) 1.403; 1.4  d) 0.526; 0.5
3. \( a = 20, b = 43, c = 30, d = 30 \)
4. a) 17.4  b) 280  c) 266.7  d) 8.84
5. a) 0.3  b) 0.6  c) 0  d) 1
6. a) 138  b) 1224  c) 1  d) 77.31
7. 16 cm²
8. a) 3.8  b) 0.15  c) 9.03  d) 3.23
9. a) \( \frac{1}{10} ; 0.1 \)  b) 80% ; \( \frac{4}{5} \)  c) 25% ; 0.25  d) Rs 240
10. a) 30 to 40 kg  b) 40 to 50 kg  c) 40 to 50 kg  
d) girls generally heavier

EX 10B
1. a) \( n \)  b) \( n + 1 \)  c) \( 2n + 1 \)  d) 101
2. a) True  b) False  c) False  d) True

3. 

4. a) 36.2 °C  b) 36.9 °C  c) 37.5 °C  d) 37.1 °C
5. a) 33  b) 21  c) 10  d) –3.2
Chapter 10 Revision Exercises

6. a) 9  b) 6  c) 2  d) 5
7. a) 38 °C, 27 °C, 10 °C, 4 °C, 0 °C, -7 °C, -21 °C  b) 59 degrees
8. a) Rs 450  b) 38 l  c) 760 m  d) 80 g
9. a) 2n + 3  b) 2(t + 3)  c) 2(4q - 1)  d) \(x + \frac{1}{2} - 1\)
10. a) 2  b) 2  c) 11  d) 3

EX 10C
1. a) 19, b) 71, c) 89
2. a) 100  b) 75.6  c) 1.848  d) 26.4
3. a) 3  b) 1  c) 4  d) 2
4. a) 2600  b) 1.25 l  c) 3.243 kg  d) 76 mm
5. a) m²  b) km²  c) m  d) mm²
6. a) 170  b) 460  c) 110  d) 40
7. a) 0.88 m  b) 0.5 m²  c) 0.65  d) 11.79 s
8. a) \(\frac{1}{2}\)  b) \(\frac{7}{8}\)  c) \(\frac{2}{3}\)  d) \(\frac{1}{3}\)
9. a) 49  b) 0.49  c) 0.64  d) 1.44
10. a) 25  b) 48  c) 52  d) 100

EX 10D
1. a) 6, 12, 18, 24, 30, 36, 42, 48, 54, 60  b) 2, 3, 5, 7, 11, 13, 17, 19
   c) 36, 49, 64, 81  d) 288
2. a) b)
   c) C'(2, 2)
   d) A → A, B → B'(1, 2), C → C'(2, 2)
3. a) 15 min late  b) 20 min early  
c) 2 min early  d) 2 min late  
4. a) 10  b) –26  c) 8  d) –5  
5. a) 102°  b) 25°  
c) 60° and 60°  d) 80° and 20°; 50° and 50°  
6. a) 56710  b) two hundred and fifteen thousand and seven  
c) 19028.5  d) eight hundred and forty-two thousand, two hundred and thirty-nine point five seven  
7. a) \[ n \times 2 - 3.5 \]  
b) \[ n \times 3.5 - 2 \]  
c) \[ n + 3.5 \times 2 \]  
d) \[ n \div 2 + 3.5 \]  
8. a) 1914.4  b) 0.68  c) 119.747  
9. \[ a = 150 \]  \[ b = 44 \]  \[ c = 82 \]  \[ d = 97 \]  
10. a) 4900; 5314.4  b) 24; 23.313  c) 500; 481.92  
d) 8; 7.1448  

EX 10X  
1. Output = 3(n + 2) –1 = 3n + 5  
2. a) Est = (50 – 9 + 30 – 1) \times 60  
   = 70 \times 60  
   = 4200  
b) Alisha entered 583 instead of 58.3  c) 3985.971  d) 3986.0  
3. 70°, 70°, 40° OR 70°, 55°, 55°
Chapter 11

Percentages

This chapter should be consolidation for the majority of students, although some may have been taught “cook book recipes” to obtain answers without understanding. All the strategies in the text should be presented. The mental techniques are vital for inculcating true numeracy. Calculators should not be allowed unless specifically called for.

LESSON PLANNING

Objectives

General To be able to change percentages to fractions and decimals and vice-versa, and to use percentages in simple contexts.

Specific

1. To be able to find equivalent decimals and fractions for simple percentages, and vice-versa
2. To be able to find percentages of areas of shapes, and of numeric quantities, using appropriate strategies
3. To be able to use percentages to place a set of numbers (various forms) in order of size
4. To use a calculator to convert fractions to percentages (1 d.p. after rounding) by division
5. Using suitable techniques to find percentage increases and decreases, and applying them to word problems

Pacing EX 11A and 11B very quickly. Take more time over 11C and 11M. A well-taught class may be able to skip most of the chapter, just completing EX 11M as a homework assignment.

Method Since most students will have some familiarity with the topic, emphasize the strategies. Many questions can be solved in more than one way. Is there another way of doing this? is a good question to ask.

For example, 35% of Rs 4000

STRATEGY 1: $0.35 \times 4000$

$= 35 \times 40$

$= 70 \times 20$ (double/halve)

$= \text{Rs } 1400$

STRATEGY 2: $\frac{35}{100} \times 4000$

$= \frac{1}{1} \times 35 \times 40$

$= \text{Rs } 1400$
Chapter 11 Percentages

STRATEGY 3: 10% of Rs 4000 = Rs 400
20% = 800
5% = 200
35% = Rs 1400

Assignments homework EX 11A, 11M

Vocabulary percentage, hundredth
building up in stages
dividing it out
discount

ANSWERS

Exercises

EX 11A

1. a) \( \frac{1}{5} \) b) \( \frac{7}{20} \) c) \( \frac{4}{5} \) d) \( \frac{6}{25} \)
2. a) 18% b) 75% c) 90% d) 15%
3. a) 0.39 b) 0.46 c) 0.08 d) 0.125
4. a) 55% b) 35% c) 17.5% d) 2.5%
5. a) 20% b) 40% c) 40% d) 100%
6. a) Rs 65 b) Rs 102 c) 1.92 km
d) 720 people
7. a) 1200 packets b) Rs 2100 c) 6 chairs

EX 11X \\
1. a) \( \frac{1}{7} = 0.142857 \) \\
   b) \( \frac{2}{7} = 0.285714 \) \\
   c) \( \frac{3}{7} = 0.428571 \) \\
   d) \( \frac{4}{7} = 0.571428 \) \\
   e) \( \frac{5}{7} = 0.714285 \) \\
   f) \( \frac{6}{7} = 0.857142 \) \hspace{1cm} \text{The same digits are used in a different order.} \\
   b) The digits repeat after the 6th decimal place. \\
   c) \( \frac{1}{9} = 0.111... \) \hspace{1cm} \( \frac{2}{9} = 0.222... \) \hspace{1cm} \text{The repeated digit is in the fraction numerator.} \\
   d) The digits repeat after the 2nd d.p. and the two digits always add up to 9. \\
2. a) 22.692 km  \\
   b) 4.032 l  \\
   c) 3.104 kg  \\
   d) 17.503 km² \\
3. a) 90%  \\
   b) 80%  \\
   c) 80% of 90% = 72%  \\
   d) 28%
# Chapter 12

**Quadrilaterals**

This is an activity-based chapter. Learning the properties of quadrilaterals at this stage is best acquired through practical tasks described in the exercises.

## LESSON PLANNING

### Objectives

**General**  
To be able to recognize six special quadrilaterals by name and properties

**Specific**  
1. To discover properties of special quadrilaterals by drawing and measuring  
2. To discover how quadrilaterals can be formed from right-angled triangles

### Pacing

2 lessons

### Links

Measuring length and angles, symmetry

### Method

Practical sessions: These need careful advance planning, with required materials ready for the students to use. At the start go through the text descriptions of the shapes. (The trapezium is dealt with separately before EX 12B.) A good demonstration that makes the dynamic connection in the mind between the rectangle and the parallelogram is to use a simple pile of books and shear it:

![Pile of books (front view)](rectangle.png)  
Same pile of books sheared to show parallelogram

This demonstration will help with later work on the area formula for the parallelograms.

Spelling Hint: In “parallelograms” the first two l’s are parallel!

Group work is ideal for practical work. Allow discussion of the work (but not chatter), but individuals must record their own answers.

### Resources

1. Strips: The strips referred to in the exercises may be simple cardboard strips. The long strips should be 8 cm in length; the short strips 5 cm in length. The width should be about 1 cm. There should be small holes at each end, allowing movement when the strips are connected together with small treasury tags or paper clips.
Another way of doing this is to use plastic straws and fasten them with pipe cleaner pieces.

You will need to prepare 4 long strips and 4 short strips per student. (You can reduce this number if working in groups.)

2. Triangles: The small and large triangles referred to in the exercises are right-angled triangles as shown. You will need 4 of each per student. (Again, you can reduce this by sharing.) Photocopiable sheets are provided for the triangles. If possible, copy straight onto thin card or thick paper. [See pages 49 and 50]

Assignments
This chapter is best done in class, with supervision. If homework is required, use may be made of unused Revision Exercises in Chapter 5 and/or Chapter 10.

Vocabulary
square, rhombus, rectangle, parallelogram
kite, concave, convex
diagonals, vertex, vertices
trapezium, parallel
opposite, adjacent
bisect, intersect

ANSWERS

Exercises
EX 12A
1.   b) diagonals equal   c) all 90°  d) diagonals bisect
2.   b) diagonals not equal  c) diagonals bisect  d) all 90°
3.   b) only one diagonal bisected
     c) all 90°  d) diagonals intersect at right angles
4. b) One diagonal lies outside the shape boundary.
   c) 
   d) 

5. b) Yes
d) at the vertices
c) No, opposite pairs equal.

6. c) diagonals bisect
d) opposite pairs equal

7. a) 
b) 
c) 
d) 

8. a) 
b) 
c) 
d) 

Chapter 12 Quadrilaterals
9. a) False. A square has 4 lines of symmetry. b) True
c) False. A rectangle has 2 lines of symmetry. d) True
10. a) False. A kite has one pair of opposite angles equal. b) True c) True
d) False. In a rhombus each diagonal bisects the other.

**EX 12B**

1. kite
2. rectangle; rhombus
3. trapezium
4. square
5. square; kite; rhombus
6. square; rectangle; rhombus; parallelogram
7. parallelogram
8. kite; trapezium
9. kite

**EX 12X**

1. a) square b) rhombus
c) rhombus d) rectangle
2. a) rectangle b) parallelogram c) rhombus d) kite
3 : 4 : 5 Triangle (large)
3 : 3 \cdot \sqrt{2} \text{ Triangle (small)}
In these days of cheap calculators, and calculator functions on watches and smart phones, the need to know complicated division techniques is obsolete. However, students should be able to do easy divisions mentally and on paper, and use estimation before resorting to a calculator. The different types of answer to a division problem depending on the situation is a particular focus of this chapter, i.e. the meaning of division in practical contexts.

### LESSON PLANNING

**Objectives**

<table>
<thead>
<tr>
<th>General</th>
<th>To recognize when division is required and to complete the calculation accurately using an appropriate technique</th>
</tr>
</thead>
</table>
| Specific | 1. To be able to do simple division by whole numbers and by decimals (up to 2 digits)  
2. To know when the answer to a division should be quotient and remainder, mixed number, or decimal, according to context  
3. To be able to estimate divisions involving difficult numbers, and to use a calculator to obtain results to specified accuracy  
4. To be able to recognize when division is required to solve word problems |

**Pacing**

- EX 13A and 13B fairly quickly. Take time over the rest.  
- 3 lessons, 1 homework

**Method**

- Go through Fast Division, Short Division, and dividing by simple decimals quickly (revision for most). Use EX 13A and 13B.  
- Distinguish between answers expressed either as whole number quotient and remainder, mixed number, or decimal. Give practical examples of each. Use EX 13C.  
- For the harder division, you can teach the long division algorithm if you really prefer but the text assumes calculators will be used, after prior estimation. Use EX 13D.  
- Recurring decimals is a fun topic with calculators. Follow the text and keep the class busy with Ex 13E. Some Higher level skills are involved here.

**Resources**

- Calculators (for EX 13D, 13E, and 13M)

**Assignments**

- Most suitable for homework are EX 13A, 13B, and 13M.

**Vocabulary**

- quotient, remainder  
- round off, decimal place, estimate
### ANSWERS

**Exercises**

5. a) \(8 \frac{1}{2}\) 
   b) \(9 \frac{3}{5}\) 
   c) \(2 \frac{3}{4}\) 
   d) \(4 \frac{1}{5}\)

6. a) \(9 \text{ r } 1\) 
   b) \(7\) 
   c) \(5 \text{ r } 3\) 
   d) Remainders

7. a) \(\frac{3}{4}\) each (Take \(\frac{1}{4}\) from each cake for the 4th child.)

No cake leftover

8. a) \(12.5\) m

9. \(1 \frac{1}{2}\) pieces

10. Rs 86.95

**EX 13D**

1. a) \(3 \div 3 = 1\) 
   b) \(80 \div 8 = 10\) 
   c) \(0.08 \div 2 = 0.04\) 
   d) \(400 \div 1 = 400\)

2. a) \(20; 19.7\) 
   b) \(2; 2.4\) 
   c) \(0.1; 0.1\) 
   d) \(30; 27.5\)

3. a) \(1; 1.0\) 
   b) \(12; 11.6\) 
   c) \(60; 55.4\) 
   d) \(6; 6.4\)

4. a) \(0.3; 0.3\) 
   b) \(203.2; 200\) 
   c) \(1.1; 1\) 
   d) \(335.8; 300\)

5. \(1.27\) m

6. Rs 429

7. \(31.9\) km\(^2\)

8. (c) is incorrect; \(0.1\) (1 d.p.)

9. a) \(8.64\) m\(^2\) 
   b) \(0.04\) m\(^2\) 
   c) \(216\) 
   d) cut tiles-waste

10. a) \(190.24\) m\(^2\) 
    b) \(14\) m\(^2\) 
    c) 14 carpets 
    d) Without cutting the carpets there is overlapping. 15 carpets can be arranged in 5 rows of 3 to cover the floor.
**EX 13E**

1. a) 0.3   b) 0.33   c) 0.333   d) 0.3

2. The calculator has rounded off at the screen limit.

3. a) 0.2   b) 0.428571   c) 0.45   d) 0.538461

4. a) 0.4   b) 0.857142   c) 0.692307   d) 0.63

5. 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8
   The numerator gives the recurring digit.

6. 0.142857, 0.285714, 0.428571, 0.571428, 0.714285, 0.857142
   The digits are the same six, and rotate.

7. a) 0.1   b) 0.1   c) 0.3   d) 0.3

8. a) 5.428571   b) 2.5   c) 2.5   d) 5.3

9. 0.09, 0.18, 0.27, 0.36, 0.45, 0.54, 0.63, 0.72, 0.81, 0.90
   The repeated digits are multiples of 9.

10. 0.6, 0.13, 0.2, 0.26, 0.3, 0.4, 0.46, 0.53, 0.6, 0.66, 0.73, 0.8, 0.86, 0.93
    e.g. patterns in groups of every third number:
    0.06, 0.26, 0.46, 0.66, 0.86
    0.13, 0.3 (i.e. 0.33), 0.53, 0.73, 0.93
    0.2, 0.4, 0.6, 0.8

**EX 13M**

1. a) 5   b) 8   c) 108.3   d) 7.7

2. a) 1.9   b) 0.9   c) 2.3   d) 6.2

3. a) 3.21   b) 0.415   c) 8.85   d) 7.06

4. a) 49   b) 6.7   c) 3.2   d) 930

5. a) 40   b) 20   c) 87.2   d) 3

6. a) 4 \text{ r } 3   b) 62 \frac{1}{3}   c) 0.8   d) 1 \frac{1}{2}
7. \( \frac{2}{3} \) each, no cake left over

\[
\begin{array}{c}
\text{[1/3 cut from each cake for the third child]} \\
\end{array}
\]

8. 2.14 m

9. 16

10. a) 2, 2.0  b) 5, 5.4  c) 600, 588.9  d) 0.2, 0.2

**EX 13X**

1. a) 72, 72  b) 21, 21  c) 32, 32  d) 150, 150

Dividing by 0.5 means finding how many halves are in it. This is the same as multiplying by 2. Similarly, for dividing by 0.1 and multiplying by 10, etc.

2. a) 114.285 714  b) 10 122.222  c) 1234.5679  d) 8.27273

3. \( \frac{1}{2} + \frac{1}{3} + \frac{1}{9} = \frac{17}{18} < 1 \), so the farmer's will does not correctly specify the destination of all his cows. [Don't expect students to understand this!]
The concept of negative numbers should have been met before in simple practical contexts, e.g. temperature. This is revised in the text, with time zones included. There is no attempt at this stage to define integers formally, with combination rules, although there is no harm in using the word “integer” to mean a positive or negative whole number or zero. The text in not restricted to integers: some negative decimals and fractions are included.

LESSON PLANNING

Objectives

General
1. To understand that negative numbers extend the number line, and to use them to calculate change
2. To understand and use coordinates (in 2 dimensions) in problems involving reading and plotting points with negative and positive) coordinates

Specific
1. To use < and > signs correctly between pairs of (positive and/or negative) numbers
2. To calculate correctly the change between pairs of (positive and/or negative) numbers
3. To label a coordinate grid (2-D) correctly, and use it to read and plot points, and to draw diagrams/graphs

Pacing
2 lessons, 1 homework.

Links
Geography—time zones
Sequences
Polygons, symmetry

Method
Use visual aids at this stage, even though the most able students will not need them. A horizontal number line and a world map show clearly the left-right, negative-positive convention in both cases. A vertical number line is best for temperature, water level changes, etc. Revise < and > signs: the pointy end of the sign (small) is next to the smaller number; the wide end (large) is next to the larger numbers. But deal with the (negative) common error: −5 < −1 is correct even though 5 is larger than 1. Use EX 14A.

For coordinates, begin with positive axes only, revising how to plot (x, y) points. The most common error is to confuse x and y.

Hints:
• Alphabetical order: x comes before y
• x looks like a cross, so the x-axis goes across
• When plotting, place a vertical ruler over the $x$-axis, moving left/right to find the $x$-coordinate. Then hold the ruler and move up/down to locate the $y$-coordinate.

Extend the $x$-axis to the left first, then extend the $y$-axis down in the negative direction. Lots of examples on the board; invite students to plot points, and to state the coordinates of given points. Use a “spot” for the location of each point. [More able students may see the value of using a + (plus sign) over the point where accuracy is required.]

Use the word origin for the central point $(0, 0)$. Give out coordinate grid sheets when using EX 14B.

Resources

- Number lines, horizontal and vertical, extending in the negative direction. Ideally, every classroom should have these on display permanently. (There is a vertical scale in the text.)
- Map of the world. If time zones are not clear, they should be made bold using a black marker pen.
- Photocopiable coordinate grids are available. (See page 63) The axes are drawn but students are required to label them $x$ and $y$ correctly, and provide the numbers on the scales. Each sheet may be cut in half. Students glue their work to their exercise books.

Assignments

EX 14A may be completed very quickly, EX 14B will take much longer, and many questions may give rise to discussion (“pair and share” in class). All of EX 14X or a selection from EX 14B would be suitable for homework.

Vocabulary

change
negative
(Integers, origin)
$<$ less than, $>$ greater than

ANSWERS

Exercises

EX 14A

1. a) $-5 < 5$  
   b) $0 > -15$  
   c) $7 > -10$  
   d) $-15 < -7$

2. a) $30 ^\circ C$  
   b) $24 ^\circ C$  
   c) $-3 ^\circ C$  
   d) $1 ^\circ C$

3. a) rise of 4 degrees  
   b) drop of 7 degrees  
   c) drop of 7 degrees  
   d) drop of 12 degrees

4. a) rise of 9 degrees  
   b) rise of 10 degrees  
   c) drop of 18 degrees  
   d) rise of 3 degrees

5. a) $0, -5$  
   b) $2, 5$  
   c) $-1, -5$  
   d) $-1, -8$
6. a) 0.5 m rise b) 1.5 m drop
c) 1 m drop d) 2 m drop
7. a) 1 h back b) 2 h forward c) 8 h forward d) 7 h back
8. a) –3 m b) 1 m c) –1.5 m d) –0.5 m
9. a) No change b) 5 h back c) 8 h forward d) 4 h back
10. a) –6 –4 –2 0 2 4 6 b) –5 –3 –1 1 3
c) –32 –16 –8 –4 –2 –1 d) –8 –6 –4 –2 0 2

EX 14B
1.

2. d) square
3. 

\[ D(-4, -3) \]

4. 

\[ R(0, -6) \]

5. 

b) \( R(-2, -4) \)

d) Diagonals cross at (1, 0).
6. c) isosceles

7. c) hexagon
d) y-axis

8. b) parallelogram
c) \((-1, 0)\)
d) no lines of symmetry
Chapter 14 Negative Numbers

9. d) concave kite

10. b) octagon
c) 35 cm²
d) (1, 3)

EX 14X

1. c) hexagon
d) 1
2. (Diagram of a coordinate plane with points A, B, C, and D marked with coordinates.

3. (Diagram of a coordinate plane with points A, B, C₁, C₂, C₃, and C₄ marked with coordinates.

C₁(-1, 5)
C₂(4, 5)
C₃(-1, -5)
C₄(4, -5)
Revision Exercises

All the questions in these exercises relate to topics covered in Chapters 1–14 of the text. As this is the midpoint of the material for the academic year, it is advised to make maximum use of the revision exercises before moving ahead.

A specimen examination paper is included here (after the answers to the exercises). In view of the fact that some students may have access to this Teaching Guide, it is suggested that modifications should be made.

   c) 0.766  
   d) 12.13

3. a) 24 cm  
   b) 28 cm²

4. a) 0.28  
   b) 0.494  
   c) 8.41  
   d) 9.43

5. a) 14%, $\frac{4}{10}$, 41%, 0.42
   b) $\frac{3}{5}$, 79%, $\frac{4}{5}$, 0.81
   c) 12.3%, $\frac{1}{5}$, 21.3%, 0.321
   d) 0.35, 53%, $\frac{7}{13}$, 0.54

6. a) $5r1$  
   b) $260 \frac{1}{3}$  
   c) 0.7  
   d) $1 \frac{3}{5}$

7. a) drop of 0.5 m  
   b) drop of 3.0 m  
   c) drop of 1.5 m  
   d) drop of 1.5 m

8. a) 25  
    b) 50  
    c) 21  
    d) 15

9. a) 1556  
    b) 115  
    c) 5818  
    d) 1074

10. a) 21°, 7°  
    b) 92°, 106°, 127°  
    c) 0  
    d) 245°

**EX 15D**

1. a) 240  
   b) 11.4  
   c) 2688  
   d) 114

2. a) 1190  
   b) 990  
   c) 1.361  
   d) 880.675

3. 19 cm²

4. a) 0.867  
   b) 50  
   c) 0.72  
   d) 225.4

5. Rs 2760

6. 2.78 m

7. [Diagram]
   - b) parallelogram
   - c) $(-1, \frac{1}{2})$
   - d) no lines of symmetry

8. [Diagram]
Chapter 15 Revision Exercises

9. a) \(10 \times 60 = 600\)  
   b) \(100 \times 80 = 8000\)  
   c) \(10 \times 50 = 500\)  
   d) \(30 \times 80 = 2400\)

10. \(a = 45, b = 71, c = 67, d = 18\)

**EX 15X**

1. a) \(47.9\)  
   b) \(87.684\)  
   c) \(4286\)  
   d) \(3142\)

2. \(\frac{1}{8}\)

3. \(74 \text{ cm}^2\)
Instructions

The test is 45 minutes long.
You must not use a calculator.
You will need: pen, pencil, rubber, ruler, protractor.
Try to answer all the questions.
Check your work carefully.

The marks for each question are shown in brackets. [Full marks = 80]

1. Write down the answers: [4 marks]
   a) $44 + 74 =$
   b) $92 - 61$
   c) $8.7 + 3.4 =$
   d) $5.6 - 4.9$.

2. The temperature is 18 °C. What is the temperature after [4 marks]
   a) a rise of 2 degrees?
   b) a fall of 2 degrees?
   c) a fall of 20 degrees?
   d) a rise of 20 degrees?

3. Write down the answers: [4 marks]
   a) $826 \times 10 =$
   b) $7.6 \times 4 =$
   c) $86.1 \div 7 =$
   d) $230 \div 100 =$

4. Round off these numbers to the accuracy stated: [4 marks]
   a) 76.57 (to the nearest whole number)
   b) 42.36 (to the nearest ten)
   c) 21.46 (to 1 d.p.)
   d) 6.64 (to 1 d.p.)

5. The shape is a parallelogram. Calculate its perimeter. [4 marks]

6. Work out: [6 marks]
   a) $66.7 + 5.93 =$
   b) $6.51 - 5.475 =$
7. Aisha rolls a dice and adds 4 to the number shown. [6 marks]
   a) Make a list of possible scores.
   b) What is the probability of a score which is a multiple of 5? (fraction answer)
   c) What is the probability of a score more than 7? (decimal answer)
   d) What is the probability of a score more than 10?

8. Work out: [6 marks]
   a) $7.24 \times 5.3 =$
   b) $1.908 \div 0.06 =$

9. [6 marks]
   a) With your protractor measure the size of the acute angle accurately.
   b) Now measure the obtuse angle.
   c) Calculate $x$ in the diagram below (not drawn to scale):

10. Write down the missing numbers or formula in the input and output lists: [6 marks]
    
    ![Diagram](diagram.png)
    
    + 3
    \hspace{1cm} \times 2

    1
    
    1.5
    
    (a) 2400
    
    (b)
    
    (c)
    
    (d)
    
    (e)

11. A pair of shoes is priced at Rs 6600. A discount of $12\frac{1}{2}\%$ is offered in a sale. Work out the sale price. [6 marks]

12. A dozen bottles of water, each weighing 1.6 kg are packed into a carton. The empty carton weighs 0.8 kg. What is the total weight of the carton when fully packed? [6 marks]
13. a) On the coordinate grid label the $x$ and $y$ axes (from $-6$ to $6$) [6 marks]
   b) Plot and label the points $A(3,5)$, $B(3,-3)$, $C(-4,-3)$, and $D(-4,5)$.
   c) Join $ABCD$ to form a quadrilateral. What kind of quadrilateral is it?
   d) Write down its area.

14. Draw a diagram showing how 5 cakes (equal size) may be divided equally among 3 children, with no cake left over. How much cake does each child receive? [6 marks]

15. Use estimates to find out if any of these is not correct. Show your working: [6 marks]
   a) $9.253 \div 4.87 = 1.9$  
   b) $52.17 \div 10.23 = 1.5$
   c) $0.6258 \div 2.98 = 0.21$  
   d) $28.8 \div 0.48 = 60$

Notes on the specimen paper, and guide to setting examinations
1. Start with easy questions and move on to the more difficult later.
2. Leave spaces between the questions for answers on the question paper.
3. Total marks for this paper are 80. If you need a percentage, divide the marks by 0.8.
4. It is unwise to use these precise questions because some students may have access to this Teaching Guide.
Answers and guide to marking:

1. a) 118  
   b) 31  
   c) 12.1  
   d) 0.7  
   [1 each]

2. a) 20 °C  
   b) 16 °C  
   c) –2 °C  
   d) 38 °C  
   [1 each for the numbers; ignore units.]

3. a) 8260  
   b) 30.4  
   c) 12.3  
   d) 2.3  
   [1 each]

4. a) 77  
   b) 40  
   c) 21.5  
   d) 6.6  
   [1 each]

5. 3.2 + 1.9 = 5.1  
   5.1 x 2 = 10.2  
   (OR 3.2 + 1.9 + 3.2 + 1.9 = 10.2)  
   Ans 10.2 cm  
   [3 for correct answer, 1 for units. If wrong, allow up to 2 marks for working showing a correct method.]

6. a)  
   66.7  
   + 5.93  
   72.63  
   [2 correct digits + 1 point in correct position]

6. b)  
   6.820  
   – 5.475  
   1.345  
   [2 correct digits + 1 point in correct position]

7. a) 5, 6, 7, 8, 9, 10  
   [1]

7. b) 1/3  
   [2, allow 1 for 2/6]

7. c) 3/6 = 1/2 = 0.5  
   [2, allow 1 for 3/6 or 1/2]

7. d) 0  
   [1]

8. a) 7.24  
   x 5.3  
   2172  
   36200  
   38372  
   [2 digits + 1 point]

8. b) 190.8  
   0.06  
   31.8  
   6√190.8  
   [1 equivalent division + 1 digits + 1 point]

9. a) 46°  
   [2; allow 1 for 45° or 47°]

9. b) 156°  
   [2; allow 1 for 155° or 157°]

[allow 2 if correct but (a) and (b) reversed.]
c) 177 + 125 = 302
    360 – 302 = 58   \[x = 58\]  [2; allow 1 if wrong but evidence of correct method.]

10. a) 8   b) 9   c) 1197   d) –0.5
    e) 2(n + 3)
    [1 each]

11. 10% of Rs 6600 is Rs 660
    5% 330
    2½% 165
    12½% 825
    Sale Price = 6600 – 825 = Rs 5775
    [1]

12. 1.6 kg × 12 = 1.6 \times 10 + 1.6 \times 2
    = 16 + 3.2
    = 19.2
    (or long multiplication) [4]
    Carton weight 0.8
    Total 20.0 kg [2]

13. a) x, y correct and scales labelled [1]
    b) points plotted: all 4 correct [2; allow 1 for 3 correct]
    c) rectangle [1 drawn, 1 named]
    d) 56 cm² [1; ignore units]

14. \( \frac{5}{3} = 1 \frac{2}{3} \) each [1 answer; 4 diagram]

15. a) 9 ÷ 5 ≈ 2
    b) 50 ÷ 10 = 5, Incorrect
    c) 0.6 ÷ 3 = 0.2
    d) 30 ÷ 0.5 = 60 [1 each for correct working + 2 for identifying (b)]
Children love to use calculators, but there can be problems. Very old calculators may not give correct operator priority (e.g. \( 4 + 3 \times 2 = 14 \) when it should be 10). High specification modern calculators, on the other hand, have multiple modes so students need to know how to obtain the decimal display, (e.g. \( 8.5 \div 6.5 = \frac{17}{13} \) exactly, when we require 1.30769…) It is useful if there is a school policy recommending a standard machine, otherwise class teaching can become quite stressful. If you are faced with multiple models, try to obtain the help of an assistant for your calculator lessons, maybe an older pupil, to move around and deal with the numerous cries for help!

**LESSON PLANNING**

**Objectives**

<table>
<thead>
<tr>
<th>General</th>
<th>To be able to use relevant checking techniques when using a calculator</th>
</tr>
</thead>
</table>
| Specific | 1. To use 1 s.f. rounding off method for prior estimation of a calculation  
2. To use the inverse operation method of checking a calculation  
3. To use entering of numbers in a different order method to check the total of a list  
4. To use odd and even properties to spot obvious errors in a calculation  
5. To use divisibility tests to spot obvious errors in a calculation  
6. To acquire the habit of seeing if the answer to a calculation is reasonable |

**Pacing**  
Fairly brisk, most of this would have been met before.  
Maximum 2 lessons, 1 homework

**Links**  
Arrow diagrams (using the inverse check)  
Units (reasonable check)

**Method**  
- See preliminary remarks about the range of machines available, and be prepared! Didactic class teaching from the front may work initially, but once the calculators are out, don’t even try.
- You may need a whole lesson on divisibility tests if students have not met these before. If so, you are advised to do this first. Ask them to write out the tables, do digit sums, look for patterns. Summarize in a plenary, showing how this knowledge can be used to spot errors, e.g.  
  \[ 372 \times 0.4 = 148.6 \] is wrong because the answer is not a multiple of 4 (last two digits, 86, not a multiple).  
- Using the inverse can be explained in 20 seconds with arrow diagram reinforcement and a few oral examples:
Chapter 16  Using your Calculator

12 + 3 = 15

How do I get back to 12? Subtract 3

12 + 3

15

−3

• Estimation and lists can be quickly revised.
• Also odds and evens; applying these to decimals can be a bit tricky. The last digits are used, but for addition/subtraction we need the same number of d. p. and zero counts as even for this purpose. For example,

3.6 + 2.71

= 3.60 + 2.71 (both 2 d. p.)

= EVEN + ODD

= expected answer ODD (2 d. p.)

Resources

Calculators (Have spares for those who forget. Sharing is not viable for this work.)

Assignments

homework—finish the digit sum patterns
classwork—Exercise 16A

Vocabulary

Calculator, rounding off, estimation, inverse, odd, even, divisibility

Fun note

DIVISIBILITY is a great word to use when playing Hangman. They usually guess letter I early, giving _ I _ I _ I _ I _ I _ _ and general puzzlement all round!

ANSWERS

Exercises

EX 16A

1. a) 0.165; 0.165 + 0.819 = 0.984
   
   b) 8.4138; 8.4138 ÷ 1.11 = 7.58
   
   c) 8.54; 8.54 × 0.74 = 6.3196
   
   d) 40.38; 40.38 − 5.48 = 34.9

2. a) 28.992
   
   b) 1539.74
   
   c) 699.59
   
   d) 11.36

3. a) Wrong, because EVEN + ODD should be ODD
   
   c) Wrong, because ODD × ODD should be ODD
   
   d) Wrong, because EVEN × either should be EVEN

4. a) 10; 11.1
   
   b) 860; 905.5
   
   c) 480; 514.3
   
   d) 62; 64.9

5. a) 1 + 1 = 2 not a multiple of 3
   
   b) 31.44 does not end in 0 or 5.
c) \(8+5+8 = 21\) not a multiple of 9

d) 26 is not a multiple of 4.

6. a) not reasonable  
   b) reasonable
   c) reasonable  
   d) not reasonable

7. a) 0.21; 0.2  
   b) 3; 2.7
   c) 11; 10.8  
   d) 240; 236.8

8. a) 3.33; 3+3+3 = 9, multiple of 9  
   b) 1.636; even
   c) 243.6; 2+4+3+6 = 15, multiple of 3
   d) 51.726; 5+1+7+2+6 = 21, multiple of 3 and even

9. a) 7.0  
   b) 3.4  
   c) 315.3  
   d) 34.2

10. a) 2.9  
    b) 3.8  
    c) 1570.5  
    d) 64.5

EX 16X

1. a) 946.6  
    b) 1.2  
    c) 97.1  
    d) 130.9

2. \(12345679 \times 9 = 111111111\)
   
   \[
   \begin{array}{c}
   18 \\
   27
   \end{array}
   \begin{array}{c}
   222222222 \\
   333333333
   \end{array}
   \]
   
   etc

   Including the digit 8 puts a zero in each answer.

3. 1001 = 7 \times 11 \times 13
It is amazing how many students can do geometry in 2–dimensions but find it difficult to visualize in 3–D. The 3–D muscles of the mind need to be exercised. Practical experience of making models teaches much about parallels, equal lengths, location of right-angles, etc., just by doing. Using ready-made models for class observation is a second-rate learning experience.

**LESSON PLANNING**

**Objectives**

**General**
1. To recognise the main features of cubes, cuboids, pyramids and prisms
2. To draw diagrams and nets, and calculate some volumes

**Specific**
1. To refer to vertices, edges and faces correctly (avoiding the term “sides”)
2. To count the number of vertices, faces, and edges of cubes, cuboids, pyramids and prisms, and recognize each solid
3. To point out on a model of a solid any planes of symmetry
4. To build models of solids using given nets, or using pipe cleaners and straws (skeleton models), and to recognize a cube from any of its nets
5. To be able to draw representations of solids on spotty paper
6. To calculate the volume of a cuboid, a cube, and composites, and to calculate lengths given volume

**Pacing**
4 lessons, 2 homeworks

**Links**
Properties of square, rectangle

**Method**
First, have a model-making session. Nets are available (in this chapter of Guide) for photocopying onto thin card. Divide class into groups and allocate materials accordingly. Each group should make a variety of models, including skeletons. For example, skeleton cube:

- straw
- folded pipe-cleaner to fix the vertex
Second, another practical session in groups, with models assigned to each group. Use EX 17A. Squared paper will be needed for question 4. The spotty paper (in this chapter of the Guide) is suitable, or use standard graph paper.

Third, do a straight introduction to drawing solids on paper, going through the two Rules in the text. Set EX 17B, and circulate: many will need help.

Fourth, introduce the volume formula slowly, using "layers". The formula should arise naturally, rather than being stated as a fact out of the blue. Use EX 17C.

### Resources
- Nets, pipe-cleaners, scissors, straws for model-making
- HINT: For fixing models together, provide small self-adhesive labels. This avoids the need for tabs (difficult to cut out) and glue (messy) or Scotch tape (big time-waster in the classroom).
- Square and triangular spotty paper (photocopiable master copies provided in this chapter of the Teaching Guide on page 82 and 83)

### Assignments
- The practical work is best done in groups in class. Suggested homework assignments are:
  - EX 17A #3 and 4
  - EX 17C, selection from #1–9.
    - #10 is an extension to prisms, not explicitly taught, for the more able students to puzzle over.

### Vocabulary
- vertex, face, edge (no sides) for solids
- cube, cuboid, pyramid, prism
- plane of symmetry
- net; skeleton model
- 2-D, 3-D

### ANSWERS
### Exercises
#### EX 17A
1. The cube has the most planes of symmetry: 12
2. \( F + V - E = 2 \) in each case
3. a) cube       b) pyramid       c) cuboid
4. All of them are nets of cubes.
Nets

Cube

Pyramid (triangular base)
Cuboid
Pyramid (Square base)
1. (example)

EX 17B

2. example

Chapter 17 Solids
3. Example

EX 17C

1. a) 30 cm$^3$  
   b) 34.675 cm$^3$  
   c) 80 000 cm$^3$  
   d) 476 cm$^3$

2. a) 64 cm$^3$  
   b) 125 cm$^3$  
   c) 250.05 cm$^3$ (2 d.p.)  
   d) 2048.4 cm$^3$ (1 d.p.)

3. 256 cm$^3$

4. 41 000 cm$^3$

5. a) 10 cm  
   b) 4 cm  
   c) 30 cm  
   d) 2.5 cm

6. 4 cm

7. 5 cm

8. 6.75 m$^3$

9. 21 000 cm$^3$

10. 12.6 cm$^3$
The concept of ratio is quite hard to explain in words but easy to grasp intuitively. If doubling one quantity causes the other to double, then we have direct proportion.

### LESSON PLANNING

#### Objectives

**General**
To grasp the concept of proportion and its implications

**Specific**
1. To be able to express correctly proportions and fractions relating to a direct proportion situation, and do simple calculations
2. To be able to compare two quantities using a ratio (in its simplest form)
3. To be able to divide up a quantity in a given ratio or ratios
4. To recognise indirect proportion situations, and to calculate accordingly

#### Pacing
3 lessons maximum, 1 homework

#### Links
Cancelling down fractions, units

#### Method
EX 18A is revision, so the introduction to this should be brief. In some classes it may be omitted altogether.
The next section, bringing in direct proportion, needs a lot of oral work with examples such as those in the text, and others. It is good to make clear that not everything changes in direct proportion. For example,

> Uzair grows 3 cm in 6 months.
> How much will he grow in 12 months?
> [Growth is not at a constant rate]

Use EX 18B #1–5.

Comparing quantities and dividing up using ratios can be done by other methods, but the text methods are recommended with this age-group of students.

Use the rest of EX 18B.

For indirect proportion in EX 18C, there are alternative methods that could be used without involving ratio. If you wish to use it, then you will have to insist on the ratio reversal (flip) method. [Many students understand inverse proportion better at a later stage when reciprocal graphs are introduced: teacher may omit the topic here.]

#### Assignments
Skip EX 18A, or set it as a diagnostic homework
EX 18B #1–5 classwork, #6–10 homework
EX 18C classwork (or omit)

#### Vocabulary
ratio, direct proportion, indirect proportion
ANSWERS

Exercises

EX 18A
1. 1:3
2. 2:3
3. 5:8
4. 140:1
5. 40 g
6. 80 blue tiles
7. 28 red, 32 black beads.
8. 1:9
9. 1:3
10. 1:2

EX 18B
1. a) 4 l  b) 12 l  c) 20 s  d) 10.5 s
2. a) 275 g  b) 500 g  c) 5  d) 187.5 ml  e) 100 g
3. a) 3:2  b) 1:2  c) 1:3  d) 2:7
4. 15:2
5. a) 3  b) \(\frac{3}{4}\)  c) \(\frac{1}{4}\)  d) \(\frac{1}{3}\)
6. a) 3:100  b) 3:20  c) 1:30  d) 1:1000
7. a) Maria Rs 2000, Nimra Rs 1600  b) Maria Rs 1600, Nimra Rs 2000
   c) Maria Rs 2400, Nimra Rs 1200  d) Maria Rs 600, Nimra Rs 3000
8. a) Sameer 6, Taha 12, Umair 18 parcels  b) Sameer 18, Taha 6, Umair 6 parcels
   c) Sameer 12, Taha 15, Umair 9 parcels  d) Sameer 3, Taha 30, Umair 3 parcels
9. a) 24 km  b) 25 miles  c) 11.2 km  d) 7.5 miles
10. a) $ 95.76  b) $ 3.36  c) Rs 252
**EX 18C**

1. 6 days
2. 24 snacks
3. 2 h
4. 18 km/h
5. 18 workers
6. 16 days
7. Rs 200
8. 18 h
9. 6 days
10. 80 min

**EX 18X**

1. a) $1 \frac{1}{2}$ days  
   b) 12 men  
   c) They flip.
2. a) 25 days  
   b) 15 days  
   c) 3 days  
   d) They flip.
3. a) direct  
   b) indirect  
   c) indirect  
   d) direct
Students will have met frequency tables, pictograms, and bar charts before. The line graph, basically a simplification of the bar chart, may be new. At this stage also, the scales will probably be more difficult to read than hitherto.

**LESSON PLANNING**

**Objectives**

<table>
<thead>
<tr>
<th>General</th>
<th>To interpret correctly graphs of difference and proportion derived from grouped and ungrouped data</th>
</tr>
</thead>
</table>
| Specific | 1. To understand that pictograms, bar charts, and line graphs illustrate differences, and that pie-charts illustrate proportions  
2. To interpret correctly from given graphs; to draw line graphs correctly from given data  
3. To understand why data is grouped; to use grouped frequency tables and interpret bar charts derived from grouped data; to understand that grouping results in loss of information (e.g. range) |

| Pacing | 2 lessons, 2 homeworks |
| Links | Reading scales, fractions |

**Method**

Elicit from the students as many kinds of graph as they can think of. (If there is time, they could be asked to bring in examples from newspapers, magazines, food cartons, etc.) Put these into categories. Then follow the text.

EX 19A is easy but important. (Question 8 needs graph-paper.) This exercise lends itself to (controlled) class discussion. “Pair and share” technique may be used, i.e. students are responsible for their own answers but may discuss (only) with their neighbour. Judicious pairing is recommended.

For the section on grouping, start by asking how they would draw the graph if there were hundreds of data items. This leads naturally to grouping as a strategy to summarise it. Then follow the text.

Emphasize labelling the horizontal scale correctly. Avoid labelling 1–10, 11–20, etc., which, although not wrong, is rather untidy.

The column boundary method is better, with an eye to later work.

EX 19B repeatedly asks questions designed to show that grouping results in some loss of information. The range cannot be found precisely; we cannot know for certain any specific score, and the best we can do for a mode is to state the most likely interval of values. (Questions 3 and 9 require graph paper.)
### Resources
Graph paper (standard 2 mm recommended) for EX 19A #8 and Ex 19B #3 and 9.

### Assignments
Set homework from the exercises. They can be quite time-consuming and all should be completed.

### Vocabulary
- pictogram, bar chat, line graph, differences
- pie chart, proportions
- range
- frequency table
- grouped data

### ANSWERS

#### Exercises

**EX 19A**

1. a) 6  
   b) 9  
   c) $\frac{3}{2}$  
   d) November; 11

2. a) Science; 70%  
   b) History; 30%  
   c) English, Maths  
   d) 5% better

3. a) Uppex; Rs 500 000  
   b) Toppo; Vroom  
   c) (i) Vroom  
   (ii) Uppex  
   (iii) Toppo  
   d) 7\text{ extra}

4. a) $\frac{3}{4}$  
   b) $\frac{1}{3}$  
   c) 50  
   d) 22

5. a) 1  
   b) 2  
   c) A  
   d) 16

6. a) Rs 8400  
   b) $\frac{1}{4}$  
   c) Rs 10 000  
   d) Rs 24200

7. a) size 41; 3 girls  
   b) 90  
   c) 38; 30  
   d) 5
8. a)

10. a) 4   b) 14   c) 9 to 12   d) 3; no

EX 19X

a) graph

b) medium

c) 90 cm; actual lengths not known; 90 cm; 70 cm

d) \[
\frac{18}{159} = 0.11 \text{ (2 d.p.)}
\]

e) It doesn't matter: measure the snake again.
Chapter 20 Revision Exercises

All the questions in this revision chapter relate to topics covered in Chapters 1–19 of the text.

ANSWERS

Exercises

EX 20A

1. a) 23.5%  b) 31.6%  c) 39.1%  d) 34.3

2. a) square, rhombus or kite  b) rhombus, parallelogram or kite
    c) square  d) kite

3. a) 60  b) 24  c) 13.8  d) 3

4. [Diagram of a quadrilateral with points A, B, C, D, and R at (-1, 1).

5. a) 5  b) 0.33  c) 0.04  d) 0.02

6. a) 11.4  b) 86.2  c) 2.4  d) 0.5

7. [Accurate angle drawings; expect answers within ± 10°.]

8. a) 12.6  b) 430  c) 194.4  d) 338.4

9. [Graph with values from 0 to 1 at intervals of 0.1.]
10. a) 0.339  b) 10.67  c) 100  d) 788

EX 20B
1. a) 29 cm²  b) 30 cm
2. a) 28  b) 5.279  c) 0.467  d) 0.169
3. a) $1 + 2 + 4 = 7$, not a multiple of 3  b) does not end in 5 or 0  
   c) $8 + 8 + 6 = 22$, not a multiple of 9  d) 66 not a multiple of 4
4. a) No  b) Yes  c) Yes
5. a) $\frac{3}{10}$  b) $\frac{7}{10}$  c) $\frac{3}{7}$  d) $2 \frac{1}{7}$
6. a) 4 pins  b) 0.62  x) 0.18; 0.20  d) 10%
7. a) $\frac{1}{10}$, 16%, $\frac{3}{5}$, 0.61, 62%  b) $0.18, \frac{1}{5}, \frac{4}{5}$, 81%, 0.82  
   c) 0.26, 26.1%, 0.62, 66%, $\frac{2}{3}$  
   d) $\frac{1}{5}$, 0.21, 23%, $\frac{3}{13}$, 0.32
8. a) Yes  b) Yes  c) Yes  d) No
9. a) 6 r 1  b) $84 \frac{2}{3}$  c) 0.7  d) $2 \frac{7}{10}$
10. a)  
   c) 

EX 20C
1. a) 100  b) 17  c) −700  d) 0
2. a) 471  b) 244  c) 29  d) 446
3. $a = 162, b = 143, c = 38, d = 51$
4. 16.8 km²
5. 0.25
6. a) 45.2  b) 0.866  c) 0.967  d) 16.55

7. 35 cm²

8. a) 3.1  b) 0.054  c) 3.65  d) 7.07

9. a) 0.24; 0.2  b) 9; 9.3  c) 7.6; 7.8  d) 440; 436.6

10. EX 20D

1. a) Sara Rs 1000, Taimoor Rs 2000, Uzair Rs 3000
   b) Sara Rs 2000, Taimoor Rs 1000, Uzair Rs 3000
   c) Sara Rs 1500, Taimoor Rs 2000, Uzair Rs 2500
   d) Sara Rs 1200, Taimoor Rs 1600, Uzair Rs 3200

2. a) 1000 to 1500 m²  b) 2500 to 3000 m²  c) 25  d) 125

3. Rs 375

4. a) Yes  b) No  c) Yes  d) Yes

5. 2.63 m

6. a) 25 cm  b) −35 cm  c) −5 cm  d) −65 cm
7. a) \( n \rightarrow 3n \rightarrow 3n - 2 \)  
   b) \( m \rightarrow m - 2 \rightarrow 3(m - 2) \)  
   c) \( p \rightarrow p + 2 \rightarrow 2(p + 2) \)  
   d) \( q \rightarrow \frac{q}{2} \rightarrow \frac{q}{2} + 5 \)  

8. a) 400  
    b) 8000  
    c) 400  
    d) 2400  

9. a) \( n = 180; 170^\circ, 190^\circ \)  

10. Rs 3783  

**EX 20X**  
1. They all recur after 6 d.p. The 6 recurring digits always add up to 27.  
2. a) 2.37  
   b) 12.3  
   c) 1414  
   d) 5.58  
3. 25^\circ, 50^\circ, 105^\circ
There are three parts to this topic: how units of measurement relate to each other; accurate drawing and measuring using ruler and protractor; and a difficult section on the calendar, time intervals and time zones.

**LESSON PLANNING**

**Objectives**

**General**
To use appropriate units and the relationships between them correctly; to draw and measure accurate lines; to calculate time intervals and time zones

**Specific**
1. To be aware of the huge range of instruments of measurement and know what some of them measure
2. To memorize the relationships between basic metric units and use the information in calculation
3. To draw lines on diagrams according to instructions and measure them, to an accuracy of ± 1 mm
4. To know the number of days in each month, and calculate the number of days between given dates
5. To use time-zone information to work out the time elsewhere in the world

**Pacing**
3 lessons, 2 homeworks

**Links**
Negative numbers, polygons

**Method**
Make a classroom display on the theme of Measurement. Include pictures of measuring instruments of all kinds, brought in by students. Failing that, call for names of instruments and what they measure, and make a display of those. Mention should be made of:
- micrometer, ruler, tape measure, trundle wheel, theodolite, odometer, SAT-NAV, for measuring length, distance, perimeter
- electronic balance, shopkeeper’s balance, weighbridge, bathroom scales, post office scales, chemical balance for measuring weight (mass)
- clock, calendar, stopwatch, hourglass, candle, Sun, Moon for measuring time
- medicine spoon, teaspoon, dessert spoon, measuring jug, calibrated tank for volume
- thermometer, thermostat, thermocouple, for measuring temperature.

Then move from instruments to the units of measurement. Follow the text. These should all be memorized, especially the two relationships between weight and volume. Use Exercise 21A.
For the drawing, have a mass pencil-sharpening session beforehand. Suggest H pencils rather than HB. Show, using board ruler, how to place the ruler and draw/measure accurately. Use EX 21B.

For the calendar section, expect a lot of distress. Students do not find it easy, a position shared also by many adults! Do not expect high scores here. A number of examples should start them off. Follow the text, but more examples will be needed.

### Resources
- Sharp pencils (H recommended)
- Protractor
- Board ruler (for demonstration)

### Assignments
- Do EX 21B and C in class.
- EX 21A and M recommended for homework

### Vocabulary
- Leap year
- Tonne
- Balance, stopwatch, thermometer
- Micrometer, weighbridge, medicine spoon, measuring jug
- Consecutive
- Time-zone

### ANSWERS

#### Exercises

**EX 21A**

1. a) cm or mm 
   b) g 
   c) min and s 
   d) °C
2. a) mm 
   b) t 
   c) ml 
   d) ml
3. a) 32 
   b) 42 
   c) 348 
   d) 3480
4. a) 5 
   b) 2.5 
   c) 6200 
   d) 7250
5. a) 800 
   b) 450 
   c) 9.85 
   d) 0.65
6. a) 4000 000 
   b) 2.65 
   c) 25000 
   d) 3.74
7. a) 7000 
   b) 4650 
   c) 1.25 
   d) 0.75
8. a) 3000 
   b) 4216 
   c) 8.245 
   d) 4800
9. a) 10 080 
   b) 1461 
   c) 744 
   d) 86 400
10. a) 4.5 kg 
    b) 20 tonne 
    c) 2.1 l 
    d) 1.5 l

**EX 21B**

1 to 4 Accurate line drawings [expect ± 1 mm accuracy.]

5. \( AB = 61 \text{ mm}, \ BC = 26 \text{ mm}, \ AC = 68 \text{ mm} \)
6. $AB = 6.8 \text{ cm}, \ BC = 4.5 \text{ cm}, \ CD = 8.4 \text{ cm}, \ DA = 2.9 \text{ cm}$

7. $PQ = PS = 4.5 \text{ cm}, \ QR = SR = 8 \text{ cm}$, kite

8. 

![Triangle with sides AB = 6.8 cm, BC = 4.5 cm, CD = 8.4 cm, DA = 2.9 cm.](image)

9. 

![Right triangle with sides AB = 3 cm, BC = 4 cm, AC = 5 cm.](image)

10. 

![Square with diagonals equal 85 mm, intersect at 90°.](image)
**EX 21C**

1. a) 7       b) 26       c) 58       d) 18
2. a) 10      b) 26       c) 38       d) 48
3. a) 23      b) 31       c) 32       d) 59
4. a) 7       b) 7        c) 6        d) 7
5. a) 7y 2 months b) 7y 3 months c) 6y 11 months d) 6y 10 months
6. a) 8:53 pm  b) 0453
7. a) 4:16 am  b) 1146
8. a) 1455     b) 35 min   c) 12
     d) 8 weeks 2 days
9. a) 70      b) 10       c) 12
     d) 8 weeks 2 days
10. a) 60     b) 8 weeks 4 days c) Friday
     d) Thursday; No

**EX 21M**

1. a) °C; thermometer  b) km; odometer  
    c) g; chemical balance (or electronic balance)  d) min and s; stopwatch
2. a) 260       b) 3.15      c) 380       d) 1.55
3. a) 5762      b) 5329      c) 3.75      d) 336
4. a) 7500      b) 7500      c) 300       d) 25 min
5. \( AB = 59 \) mm \( BC = 48 \) mm, \( AC = 63 \) mm
6. No. Long sides are 68 and 69 mm (not equal).
7. Accurate drawing
8. a) 42       b) 71       c) 12 weeks 4 days
     d) Thursday
9. a) 7       b) 7        c) 6        d) 7
10. a) 9 h forward b) 1200    c) 2:20 pm   d) 0540
EX 21X

1. 31 622 400
2. temperature
3. The Julian calendar had too many leap years. Now the centuries are only leap years every 400 years.
4. After every few years an extra second is put in because the length of the day is slightly longer than 24 hours.
5. e.g. 28/07/15   7/28/15   2015/07/28
   28/07/15   07/28/2015
   28/Jul/2015  28th July, 2015 etc.
BODMAS (or BIDMAS or PEMDAS or any other variants) should not be taught as a magic rule: it is a mnemonic to help us remember the priorities of operations. Perhaps it should be written B(ODM)(AS) to avoid making the following kind of error:

\[
15 - 7 + 6 = 15 - 13 \quad \text{(taking + first)}
\]
\[
= 2
\]
The correct answer is of course, 14.

**LESSON PLANNING**

**Objectives**

- **General**
  To use the correct order of priority of operations in calculations and linear algebraic expressions

- **Specific**
  1. To know that brackets must be worked out first, followed by of/multiplication/division (from left to right), followed by addition/subtraction (from left to right)
  2. To interpret correctly the priorities in algebraic expressions such as \(2n - 3\) and \(2(n - 3)\)

**Pacing**

Very fast. The brackets are new, the rest is revision.
1 lesson, 1 homework

**Links**

Arrow diagrams

**Method**

Remind class of natural priority of mult/div over add/sub. Most calculators do this automatically, so if there is any confusion show that \(5 + 2 \times 4 = 13\) (not 28)

Brackets, however, trump everything.

Brackets say “DO ME FIRST!”

Use BODMAS with care. As in the text, there are three levels.

\[
\begin{align*}
B & \\
O & D & M \\
A & S
\end{align*}
\]

On the same level, work from left to right Algebra emphasizes these priorities because of the “close bond” notation, e.g.

\(2n\) and \(\frac{n}{2}\) would take priority over \(n + 2\) or \(n - 2\), unless disrupted by brackets.
Assignments
Either exercise for homework, the other in class. They are both easy enough for answers to be written down without showing working.

Vocabulary
brackets
priority

</table>
EX 22X

1. a) $4a + 2a = 6a$
   b) $7b + 5b = 12b$
   c) $c + 2c = 3c$
   d) $8d - 3d = 5d$

2. 2 is correct. Division has equal priority to multiplication and we should work left to right, but the brackets have to be completely removed first, i.e.

   $12 ÷ 2(1+2)$
   $= 12 ÷ 2(3)$
   $= 12 ÷ 6$
   $= 2$
   Correct

   $12 ÷ (2(1+2))$
   $= 12 ÷ 2(1+2)$
   $= 12 ÷ 2(3)$
   $= 12 ÷ 2 \times 3$
   $= 6 \times 3$
   Incorrect

   Another way of looking at this is that multiplying factors outside brackets have to be dealt with before the mult/div priority. This “multiplication by juxtaposition priority rule” is not part of BODMAS.

3. 0.4
Students often make errors reading scales and this chapter is designed to focus on the problem.

LESSON PLANNING

Objectives

General To read correctly from scales, dials, and digital clocks, with relevant calculations

Specific
1. To know the difference between digital and analogue
2. To read accurately from linear scales and circular dials
3. To label accurately intermediate points of scales and dials
4. To know the equivalent 12 or 24-hour digital and 12-hour analogue times
5. To calculate time intervals using the different methods of stating the time

Pacing 2 lessons, maybe 1 homework

Links Science equipment, household equipment, drawing accurately

Method
• Context is everything. Try to assemble some items with scales and dials from the science lab, or used in the home. These can be used to elicit the digital/analogue distinction. The text also has a few pictures, but the actual real equipment has greater impact. Follow the text as regards inculcating the habit of asking “What is the value of each division?” when reading an analogue scale/dial. Use board examples.

Before setting EX 23A, be prepared by issuing lines and dials pre-drawn to save time.

• Changing digital to analogue time and vice-versa is not too difficult, but calculating time intervals is much harder. Two examples are given in the text, but more will be required. Suggested sequence is
  i) 0600 to 0800
  ii) 0600 to 0840
  iii) 0545 to 0840
  iv) 0440 to 0910
  v) 0350 to 0910

  to get the rhythm of how to break it up. Then do some analogue examples. Use EX 23B.

• Although EX 23X is for high-flyers, #1 could be an interesting class project, given time.
**Resources**
Various items of measuring equipment, blank lines, and circular dials (photocopiable sheets at the end of this chapter of the Teaching Guide on pages 110 and 111)

**Assignments**
Best option for homework is to finish EX 23A started in class. EX 23B is more difficult: best tackled in class where support is available.

**Vocabulary**
digital, analogue, 24-hour, 12-hour
division
time interval

**ANSWERS**

**Exercises**

EX 23A

1. a) 18.2 cm  
   b) 10.5 cm  
   c) 5.2 m

Chapter 23 Scales and Dials

6. a) 5.1          5.3 kg
b) 5.1          5.2 kg

6. c) 5.1          5.22 kg
d) 5.1          5.24 kg

7. a) 0
b) 3.5 kg

7. c) 0.5 kg
d) 2500 g = 2.5 kg

8. a) 200 g
b) 150 g
9. a) 2.04 kPa  b) 2.2 kPa  c) 1.85 kPa  d) 1.5 kPa

10. a) 3.0 3.1 3.2 3.3 3.4 3.5 3.6 3.7 3.8 3.9 4.0
    b) 3.10 3.11 3.12 3.13 3.14 3.15 3.16 3.17 3.18 3.19 3.20
    c) 5.0 5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8 5.9 6.0
    d) 5.30 5.31 5.32 5.33 5.34 5.35 5.36 5.37 5.38 5.39 5.40

EX 23B

1. a) 3:20  b) 4:40  c) 8:05  d) 9:30

2. a) half past four  b) quarter past seven
    c) ten to seven  d) five to twelve

3. a) 0110  b) 1425  c) 1035  d) 1245

4. a) 3:20 pm  b) 8:35 am
    c) 9:15 am  d) 10:50 pm

5. a) 25 min  b) 3 h 25 min
    c) 1 h 56 min  d) 1 h 23 min

6. a) 1 h 2 min  b) 3 h 20 min
    c) 30 min  d) 1 h 2 min

7. a) 1 h 35 min  b) 1 h 18 min
    c) 1 h 5 min  d) 1 h 55 min

8. a) i)  b) i)  c) i)  d) ii)
9.  a) 1 h 19 min  
    b) 47 min  
    c) 1 h 45 min  
    d) 4 h 40 min  
10. a) 0715 0819 1508  
    b) 1218 1612 1718  
    c) 1221 2002 2112  
    d) 0909 1009 1010  

**EX 23X**

1. Many ways of expressing 12 h digital with different separators, with or without initial zero and with or without zeros for minutes less than 10, e.g.

   4:05 am = 4.05 am = 04.05 am = 4:05 am = 4\:05 am  
   etc.

2. a) 11 h 5 min  
    b) 20 h 25 min  
    c) 11 h 22 min  
    d) 45 h 45 min (or 1 day 21 h 45 min)  
3. 2030
Circular Dials
This is an early activity on the three transformations of the plane that produce a congruent image, i.e. reflection, rotation, and translation. Further transformations will follow. There is nothing quite like hands-on experience of moving shapes for developing an intrinsic grasp of geometry.

**LESSON PLANNING**

**Objectives**

<table>
<thead>
<tr>
<th>General</th>
<th>To use reflection, rotation, and translation to solve simple geometry problems</th>
</tr>
</thead>
</table>
| Specific | 1. To know the meaning of reflection, rotation and translation  
2. To identify line symmetry and rotational symmetry, and indicate them correctly on diagrams  
3. To use symmetry to summarize properties of polygons, and answer simple geometry questions |

**Pacing**

A lot will depend upon students’ previous experience. They should have met reflection and line symmetry before, but may not have done so. The later questions in both exercises may be difficult and time-consuming.  
Aim for 2 lessons, but it may need 3, or even 4.

**Links**

polygons, naming of angles

**Method**

- Demonstration method. Have pre-prepared large cardboard cut-outs of various shapes. Start with line symmetry and reflection. Ask students to place a ruler on the mirror line. Mix it with asymmetrical shapes. Then bring in some rotational symmetrical shapes, e.g. capital N or swastika. They are “balanced” (the true meaning of symmetrical) but there is no mirror line.
  
This leads naturally to define the centre of rotation. (At this stage, avoid talk of orders of symmetry.) Translation is just another way of moving a shape, not related to symmetry.
  
Use the photocopiable question sheet for EX 24A. Some students may need mirrors or tracing paper to grasp what is happening. Be prepared.
  
- The power of symmetry can be seen when considering properties of polygons. The text shows how the symmetries of a rectangle automatically give lots of other facts about it. You could do a similar demonstration with, say, an equilateral triangle. Use a large cut-out; don’t just draw it on the board. A cut-out can actually be rotated; not all children can imagine the movement from a board diagram. (Some adults too!) Use EX 24B.
### Resources
- A set of large cardboard cut-out shapes (at least A4 size) for class demonstration.
- A class set of EX 24A (photocopiable, at the end of this chapter in the Guide)
- Some mirrors: This is somewhat problematical in the classroom. A cheap, safe option is to use aluminium foil stuck onto thick card, or wrapped tightly round a short ruler. It has to be really flat, without creases.
- Tracing paper: any thin paper will do as long as it can be seen through.

### Vocabulary
- reflection, line symmetry, mirror line
- rotation, centre of rotation, clockwise
- translation, sliding, position
Exercise 24A

Answer on the sheet. Use mirrors or cut-outs to help you if you need them.

1. These shapes have line symmetry by reflection. The mirror line is shown as a broken line. Complete these diagrams and name the shapes:

   a) 
   
   Name of shape: ____________

   b) 
   
   Name of shape: ____________

   c) 
   
   Name of shape: ____________

2. These shapes have rotational symmetry by turning. Add a blob to the diagrams to indicate the centre of rotation. State how many ways the shape can be fitted into its own outline by turning around this point.

   a) 
   Fits outline ____ ways

   b) 
   Fits outline ____ ways
3. State whether the shapes in question 2 also have line symmetry:
   a) ______  b) ______  c) ______  d) ______

4. On the same diagram draw translations of the square
   a) 2 cm to the right  b) 2 cm below
   c) 5 cm to the left  d) 1 cm above
5. These designs are incomplete. They each have rotational symmetry. The blob indicates the centre of rotation. Complete each shape so that it fits into its own outline the number of ways stated.

   a) Fits outline 2 ways
   b) Fits outline 4 ways
   c) Fits outline 3 ways
   b) Fits outline 4 ways

6. In the design, triangle 1 has been repeatedly translated. The translation from 1 to 2 is 2 cm to the right and 1 cm down. On the diagram,

   a) label triangle 3 so that the translations from 1 to 3 is 5 cm to the right,
   b) label triangle 4 so that the translation from 1 to 4 is 6 cm to the right and 2 cm down,
   c) label triangle 5 so that the translation from 4 to 5 is 3 cm left,
   d) label triangle 6 so that the translation from 4 to 6 is 5 cm left and 1 cm up.
7. There is a rectangle shown on the coordinate grid.
   a) The centre of rotation is (2, 1). Mark this point with a blob.
   b) Add another rectangle to the grid so that your design has rotational symmetry and fits its own outline 2 ways.
   c) Add another rectangle by translating the original 4 cm to the right. (Now you should have 3 rectangles altogether.)
   d) Draw 3 more rectangles by reflecting all your rectangles on the \(x\)-axis.

8. a) Rotate the little square so that (1, 3) becomes the centre of rotational symmetry of a design that fits its outline 4 ways.
   b) Reflect this design so that the broken line becomes a line of symmetry.
   c) Translate both parts of your design 2 cm to the left
   d) Use broken lines to show the position of any lines of symmetry in your diagram overall.
9. Show any symmetry in these designs by using broken lines (line symmetry) and blobs (centres of rotational symmetry). If there is rotational symmetry, state how many ways the design will fit into its own outline when turned.

a) 

b) 

c) 

b) 

10. I want to move triangle I to the position of triangle II:

a) by reflection—draw the line of symmetry.

b) by rotation—how many degrees clockwise?

c) by reflection—draw the line of symmetry

d) by rotation—how many degrees clockwise?
Chapter 24  Symmetry

ANSWERS

EX 24A

1. a) Octagon
   b) Circle
   c) Rhombus

2. a) 4 ways
   b) 6 ways
   c) 3 ways
   d) 2 ways

3. a) Yes  b) Yes  c) No  d) No
Chapter 24 Symmetry

4. 
   a) 
   b) 
   c)

-5 & -4 & -3 & -2 & -1 & 0 \\
0 & 1 & 2 & 3 & 4 & 5 \\
1 & 2 & 3 & 4 & 5 & 6 \\
2 & 3 & 4 & 5 & 6 & 7 \\
3 & 4 & 5 & 6 & 7 & 8
\end{array} \]

9. 

a) 2 ways

b) 4 ways

c) 2 ways
EX 24B

1. a) BC  b) \( \angle ABO \)  c) BD  d) \( \angle AOD \)

2. a) CD  b) \( \angle CDB \)  c) \( \angle BCD \)  d) CO

3. a) BC, CD, AD  b) \( \angle ODA, \angle OBC, \angle OBA \)
   
   c) \( AO = CO \) and \( BO = DO \)
   
   d) \( \angle BOA, \angle DOA, \angle DOC, 90^\circ \), because all four total 360°

4. a) equal  b) equal  c) equal  d) opposite pairs equal

5. a) O is the midpoint of each diagonal.  b) equal  c) equal

6. 40°

7. a) \( \angle BCO, \angle CDO, \angle DEO, \angle EFO, \angle FAO \)
   
   b) \( OA, OB, OC, OD, OF \)
   
   c) \( \angle DEF, \angle EFA, \angle FAB, \angle ABC, \angle BCD \)
   
   d) \( AB, BC, CD, DE, EF \)

8. a) \( EC \)  b) 120°  c) \( \angle OCB \)  d) \( \angle OAB \)
9. b) angles on a straight line

10. a) reflection  b) rotation  c) reflection or translation  d) reflection or rotation

EX 24X

1. a) False: they can be different sizes  b) True  c) True  d) False: only one angle is common, the others can be different.

2. One possible solution—there may be others.

![Solution](image)

This solution has rotational symmetry (centre shown)

3. The lists depend on the way the letters are formed, e.g a capital O could have 2 lines of symmetry, or an infinite number. S may have rotational symmetry but if the upper part is smaller than the lower part, then it would have no symmetry. Such things can be the basis of good discussions amongst a small group of students working on this task.
All the questions in this chapter relate to topics covered in Chapters 1–24 of the text. For some ideas about using Revision Exercises, see the notes in this Guide for Chapter 10 under Methods (c) to (i).

**ANSWERS**

**Exercises**

**EX 25A**

1. a) $0.243; \text{ANS} + 0.173 = 0.416$
   
   b) $43.5162; \text{ANS} ÷ 5.46 = 7.97$
   
   c) $10.889393\,94; \text{ANS} × 0.264 = 2.8748$
   
   d) $96.74; \text{ANS} – 7.44 = 89.3$

2. 

3. a) 5:4
   
   b) 2:1
   
   c) 2:11
   
   d) 4:7

4. a) $\frac{1}{8}$
   
   b) 100
   
   c) 180
   
   d) 25

5. a) 900 mm$^2$
   
   b) 360 mm$^2$
   
   c) 5.89 cm$^2$
   
   d) 0.75 cm$^2$

6. a) 13
   
   b) 8.5
   
   c) 0.5
   
   d) 0.5

7. a) 40 min
   
   b) 2 h 14 min
   
   c) 1 h 10 min
   
   d) 1 h 55 min
8. a) 
   b) 
   c) 
   d) 3

9. Disappointed. (Discount Rs 45, sale price Rs 255)

10. a) False. Only one pair of opposite angles are equal.
    b) False. The diagonals intersect making two pairs of opposite angles equal.
    c) True
    d) True

EX 25B

1. a) 5 
    b) 2900 
    c) 2.1 
    d) 0.75

2. a) 
    b) 

   (c) square
   d) M(0.5, –0.5)

3. a) 2 
    b) 10 
    c) 4.9 
    d) 134

4. a) 73 
    b) 467 
    c) 26 
    d) 2737

5. a) I acute, II acute, III obtuse 
    b) estimates 
    c) I 28°, II 86°, III 142° (errors should be ≤ 10°.)

6. a) 568.8 
    b) 572.0 or 572 
    c) 414.72 
    d) 1.188

7. a) white 
    b) blue 
    c) red

8. a) 8.4 
    b) 11.6 
    c) 7.5 
    d) 8.7

9. 120 mm

10. a) 0.8 
    b) 2.3 
    c) 4.9 
    d) 2.5
EX 25C

1. $n \times 2 \rightarrow 2n \rightarrow +5 \rightarrow 2n + 5$

2. $a = 24, b = 28, c = 152, d = 135$

3. a) 2 b) 2 c) 1 d) 2

4. a) up 6 degrees b) down 4 degrees c) up 10 degrees d) up 2 degrees

5. a) $2 + 9 + 6 = 17$, not a multiple of 3 b) Last digit is not 0 or 5, not a multiple of 5 c) $4 + 2 = 6$, not a multiple of 9 d) Last pair of digits = 66, not a multiple of 4

6. a) 1:80 b) 1:20 c) 1:100 d) 1:125

7. a) 3 b) 3.5 c) 56 d) 1.5

8. (Diagram of points A, B, C, D on a graph)

9. a) $\frac{1}{6}$ b) $\frac{1}{3}$ c) 0 d) 1

10. a) 81.86 b) 1.676 c) 12.06 d) 11.106

EX 25D

1. a) 26 cm b) 38 cm$^2$

2. a) 370 b) 190 c) 360 d) 410

3. a) 1.1 b) 0.4 c) 8.7 d) 0.2

4. a) 650.16 b) 6733.8 c) 712.94 d) 12.04

5. Rs 850; Rs 5950

6. a) 1.59 b) 14.1 c) 9.8 d) 2.02
7. a) 

8. a) 1000 to 1500 m²  
   b) 2000 to 3000 m²  
   c) 50  
   d) 425

9. a) 70 days  
   b) 10 weeks  
   c) 9 weeks  
   d) 13 weeks 5 days

10. a) 

EX 25X

1. A dodecahedron has 12 faces.

2. 1! = 1  
   2! = 2 × 1 = 2  
   3! = 3 × 2 × 1 = 6  
   etc.

3. A collection of material would show that pie charts emphasize proportions whereas line/bar graphs emphasize differences.
This is a basic numeracy chapter. It is all about whole numbers: fractions and decimals do not appear. It checks that students have really learnt their multiplication tables by heart. Calculators should not be allowed.

**LESSON PLANNING**

**Objectives**

<table>

</table>

**Pacing**

Although this is basic, and ought to be easy, it is extremely important and so time needs to be given. 5 lessons are suggested. It may be done in 4 if one exercise is completed as homework.

**Links**

| Volume of a cube; area of a square; memorizing multiplication tables |

**Method**

- Start with multiples, as in the text. Once these are established, factors can be defined as the "building blocks" of multiples. Primes can never be multiples but they can be factors. Elicit the first 8 primes (up to 20) from the class. These must be memorized, and as many more as possible (up to 100).
- Display a Primes to 1000 poster on the noticeboard.
- The text suggests factorisation by repeated splitting of factors until they are all prime. This method has certain advantages in terms of understanding. The division algorithm, often taught, gets the right answer but it is not so clear what is going on.

For example, to factorise 45

\[
\begin{array}{c|c}
3 & 45 \\ \hline
3 & 15 \\ 5 & 15 \\ \hline
5 & 3 \\ 1 \end{array}
\]

\[45 = 3 \times 3 \times 5\]

\[= 3^2 \times 5\]
Better (also quicker) is

\[ 45 = 9 \times 5 \]
\[ = 3^2 \times 5 \]

Use EX 26A.

- The uniqueness of the prime factorisation cannot be proved at this level, but it should be convincing if different strategies produce the same prime factorisation. Only one example is given in the text. More should be done. Prime numbers are rather like atoms: each combination of primes determines each number uniquely just as surely as two atoms of hydrogen and one atom of oxygen combine to make water.

- LCM and HCF are quite straightforward but students sometimes reverse them. If they have met Venn diagrams these can be helpful. For example, 80 and 24

\[
80 = 2^4 \times 5 \\
24 = 3 \times 2^3
\]

\[
\begin{array}{c}
80 \\
\bullet 5 \\
\bullet 2 \\
\bullet 2 \\
\end{array}
\quad
\begin{array}{c}
24 \\
\bullet 2 \\
\bullet 2 \\
\bullet 3 \\
\end{array}
\]

LCM = \(2^4 \times 3 \times 5\) (all included)
HCF = \(2^3\) (overlapping)

Use EX 26B

- Use of the distributive law to generate facts should be taught implicitly and applied by the students intuitively: they need to get a feel for how numbers work. Just do it! Show them a few, and they should just follow the pattern. Use EX 26C. Calculators strictly forbidden here!

- The square root and cube root of perfect squares and perfect cubes can easily be seen from their prime factorisations. For perfect squares the factors will all be in pairs; for perfect cubes the factors will all be in threes. Follow the text. Use Ex 26D.

- As this is a foundation topic a miscellaneous set of questions is provided in EX 26M to reinforce the work.

This is the beginning of formal algebra, although there has been quite a lot of symbolic representation previously. The focus is narrow, targeted on two basic skills.

**LESSON PLANNING**

**Objectives**

<table>
<thead>
<tr>
<th>General</th>
<th>To simplify algebraic expressions by collecting like terms and forming products of terms</th>
</tr>
</thead>
</table>
| Specific | 1. To understand what is meant by like terms and unlike terms, and when and how they may be combined  
2. To know that 1 is not used as a coefficient  
3. To multiply algebraic terms correctly, using index notation, and following the convention of alphabetical order of letters |

**Pacing**

A quick chapter: 2 lessons

**Links**

Generating number facts, implicitly using the distributive law

**Method**

Keep introduction brief and simple, to maximise practice time on the exercises. Do a few starters on the board and let them loose on EX 26A. Similarly, for EX 26B.

**Assignments**

Suggested homework: to finish EX 26A

**Vocabulary**

term, like, unlike  
simplify

**ANSWERS**

**Exercises**

**EX 27A**

1. a) $4a$  
b) $2x$  
c) $7p$  
d) $10s$

2. a) $3a + b$  
b) $9b$  
c) $14x - 6y$  
d) $8x + 2y$

3. a) $10$  
b) $10$  
c) $50$  
d) $50$

4. a) $15$  
b) $15$  
c) $17$  
d) $17$

5. a) $3q$  
b) $5p + 2q$  
c) $r + 4s$  
d) $6r + 7s$

6. a) $2p$  
b) $2r$  
c) $6.5t$  
d) $1.2t$
7. a) $5 + 8a$
   b) $5 - 3a$
   c) $-2 + 3p$
   d) $2.5x - 1.5$

8. a) $2 - 5a$
   b) $2x - 6a$
   c) $a + 2c$
   d) $6x - 1$

9. a) $3 + 3a + 5b$
   b) $5 - 2a + b$
   c) $11 + 3a - 2b$
   d) $1 + b$

10. a) $3n + 3$
    b) $6n + 5$
    c) $3m - 5n + 1$
    d) $m + n - 1$

EX 27B

1. a) $10ab$
   b) $27ab$
   c) $2ab$
   d) $2a^2$

2. a) $6n^2$
   b) $5n^2$
   c) $12mn^2$
   d) $8m^2n$

3. a) $3mn$
   b) $5mn^2$
   c) $pq^2r$
   d) $4p^2q$

4. a) $15x^2$
   b) $15x^2y$
   c) $15x^2y$
   d) $15x^2y$

5. a) $2f^3g$
   b) $6f^3g$
   c) $3fg^2$
   d) $2f^3g^2$

6. a) $6st^2u$
   b) $12stu^2$
   c) $20stu^2$
   d) $6t^3u$

7. a) $5t^2$
   b) $8t^2$
   c) $12t^2$
   d) $20t^2$

8. a) $6t^4$
   b) $15t^4$
   c) $10t^2$
   d) $2t^3$

9. a) $48a^2b^3$
   b) $63ab^3$
   c) $16ab$
   d) $36abc$

10. a) $ab^2c^3d$
    b) $4ab^2cd$
    c) $12a^2cd$
    d) $12b^2c^2d$

EX 27X

1. a) $7a + 3b - 2c$
   b) $7 - a + 3b - 3c$
   c) $2b + 2c + 3t - 7$

2. a) $56p^4q^4r^4$
   b) $3m^4n^4$
   c) $36f^4g^3$

3. a) $30t^2$
   b) $33t$
   c) $40t^2$

Teach students how to read out answers correctly, using indices:

- $n^2$ is "$n$ squared"
- $n^3$ is "$n$ cubed"
- $n^4$ is "$n$ to the power 4"
This is the beginning of statistical thinking, in a very basic form. It is another skill-focused chapter. The question of whether mean, median, or mode is the best statistic in any given case can be safely left for a later stage. Now the students just need to know how to work them out and what they are for.

**LESSON PLANNING**

**Objectives**

**General**
To compare groups by calculation of a representative value, and a measure of spread

**Specific**
1. To know that mean, median, and mode are ways of representing a group in general
2. To calculate correctly mean, median and mode
3. To know that range indicates the spread of the data
4. To use these statistics to answer simple questions about groups

**Pacing**
2 lessons: some of the questions in the exercises are quite time-consuming.

**Links**
Bar charts, frequency tables

**Method**
“Are the children in class VI taller than those in class V?” How do you know? Start a class discussion about choosing a representative of a group (because “we haven’t the time to measure everybody”). This leads into the mathematical methods of doing it. Distinguish mean, median, and mode from range. The averages represent the group; the range indicates spread.
Use EX 28A. Allow calculators.

**Assignments**
#9 and 10 could be used as homework

**Vocabulary**
mean, median, mode
range, spread
in general
ANSWERS

Exercises

EX 28A

1. a) 3  b) 5  c) 7  d) 3
2. a) 7  b) 7.5  c) 8.5  d) 8
3. a) 140.4 cm  b) 106.1 cm  
   c) 114 cm  d) 101.1 cm
4. a) 39.1 s  b) 32.8 s  c) 54.8 s  d) 1 min 4 s
5. a) 20 to 40 km/h  b) Below 2 min  c) 50 to 60%  d) 135 cm
6. a) 9 kg  b) 50 runs  c) 4 °C  d) Rs 20
7. Group A: median = 130 kg, range = 25 kg  
   Group B: median = 122.5 kg, range = 25 kg  
   Group A girls are taller than Group B girls in general and their heights are equally spread out.
8. Group A: mean = 48.8 s, range = 2 s  
   Group B: mean = 48.5 s, range = 4 s  
   Group A lap times are slightly slower than Group B’s times in general, but Group A is more consistent (lower range than B)
9. Team A: median = 1.5 goals/match, range = 3  
   Team B: median = 1 goals/match, range = 5  
   Team A scores more goals per match than team B in general and are more consistent. (Team B’s performance is more variable.)
10. Term: mean = 1.8 h, range = 1.5 h  
    Holidays: mean = 2.5 h, range = 2 h  
    During the holidays Bilal uses his computer more in general and there is more variation in his use then.

EX 28X

1. 5.7 marks
2. 13 runs
3. 121 cm
Decimals feature more prominently these days because of calculators and the onward march of digital technology. However, fractions need to be understood to facilitate later work with algebraic fractions, although huge computational ability is not required.

LESSON PLANNING

Objectives

General To find equivalent fractions, decimal equivalents to fractions, fractions of quantities, sum and difference of fractions (including mixed numbers)

Specific 1. To find equivalent fractions by scaling up or down, equivalent fractions and decimals; approximate equivalent decimals by dividing out; fractions of quantities
2. To add and/or subtract fractions and/or mixed numbers

Pacing 2 lessons

Links Decimals

Method

• Unless the students have been neglected, the first part is all revision. Set EX 29A after the briefest of introductions.

• The second part will require careful explanation. Follow the text.

Where whole numbers are involved, some teach changing to improper fractions. This method is not recommended as the numbers can become very large. Deal with the whole numbers first, as shown in the worked examples. As usual, more examples should be worked on the board for the whole class.

Resources A poster showing equivalents can be useful, e.g. \( \frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \frac{8}{16} \)

|       | \( \frac{1}{2} \) | \( \frac{1}{4} \) | \( \frac{1}{8} \) | \( \frac{1}{16} \)
|-------|-----------------|-----------------|-----------------|------------------|
| 1     | \( \frac{1}{2} \) | \( \frac{1}{4} \) | \( \frac{1}{8} \) | \( \frac{1}{16} \)
| \( \frac{1}{2} \) | \( \frac{1}{4} \) | \( \frac{1}{8} \) | \( \frac{1}{16} \)
| \( \frac{1}{4} \) | \( \frac{1}{8} \) | \( \frac{1}{16} \)
| \( \frac{1}{8} \) | \( \frac{1}{16} \)

Failing that, these can be seen on a ruler with inches. There are still quite a few of these available despite official attempts to metricate everything.

Assignments Some of EX 29B in suitable for homework.

Vocabulary equivalent
ANSWERS

Exercises

EX 29A

1. a) 6  
   b) 5  
   c) 3  
   d) 12

2. c) False: Adding 7 to top and bottom is the error.

3. a) \( \frac{4}{5} \)  
   b) \( \frac{6}{25} \)  
   c) \( \frac{1}{200} \)  
   d) \( \frac{3}{4} \)

4. a) 0.15  
   b) 0.2  
   c) 0.68  
   d) 0.4

5. a) 0.73  
   b) 0.82  
   c) 0.84  
   d) 0.33

6. a) Rs 3500  
   b) 2.7 km  
   c) 0.57 s  
   d) Rs 12

7. a) Rs 3516 (nearest rupee)  
   b) 380 m  
   c) 19.32 cm  
   d) 0.735 kg

8. a) Rs 8  
   b) 90 g  
   c) 4 years  
   d) 15 m

9. a) \( \frac{1}{4} \)  
   b) \( \frac{3}{5} \)  
   c) \( \frac{13}{20} \)  
   d) \( \frac{33}{50} \)

10. a) 0.3 (1 d.p.), 0.33 (2 d.p.), 0.333 (3 d.p.)  
    b) 0.7 (1 d.p.), 0.67 (2 d.p.), 0.667 (3 d.p.)  
    c) 0.3 (1 d.p.), 0.29 (2 d.p.), 0.286 (3 d.p.)  
    d) 0.4 (1 d.p.), 0.36 (2 d.p.), 0.364 (3 d.p.)

EX 29B

1. a) \( \frac{5}{6} \)  
    b) \( \frac{9}{20} \)  
    c) \( \frac{11}{6} \)  
    d) \( \frac{1}{2} \)

2. a) \( \frac{7}{8} \)  
    b) \( 1\frac{1}{5} \)  
    c) \( \frac{5}{18} \)  
    d) \( \frac{3}{8} \)

3. a) \( \frac{5}{8} \)  
    b) \( \frac{1}{10} \)  
    c) \( \frac{1}{9} \)  
    d) \( \frac{13}{18} \)

4. a) \( \frac{3}{20} \)  
    b) \( \frac{1}{10} \)  
    c) \( \frac{1}{2} \)  
    d) \( \frac{1}{72} \)

5. a) \( 4\frac{1}{8} \)  
    b) \( 2\frac{1}{10} \)  
    c) \( 5\frac{11}{15} \)  
    d) \( 4\frac{17}{18} \)

6. a) \( 4\frac{2}{5} \)  
    b) \( 5\frac{5}{8} \)  
    c) \( 1\frac{17}{18} \)  
    d) \( 3\frac{4}{5} \)

7. a) \( 2\frac{3}{8} \)  
    b) \( 1\frac{1}{2} \)  
    c) \( 4\frac{1}{2} \)  
    d) \( \frac{1}{3} \)

8. a) \( \frac{3}{4} \)  
    b) \( 1\frac{1}{2} \)  
    c) \( \frac{7}{9} \)  
    d) \( \frac{3}{5} \)

9. a) \( \frac{1}{2} \)  
    b) \( \frac{2}{3} \)  
    c) \( \frac{1}{8} \)  
    d) \( \frac{1}{6} \)

10. a) \( \frac{1}{3} \)  
    b) \( -\frac{2}{5} \)  
    c) \( -\frac{1}{4} \)  
    d) \( -\frac{1}{10} \)
EX 29X

1. a) $\frac{7}{8}$  
b) $\frac{15}{16}$  
c) $\frac{31}{32}$  
d) $\frac{63}{64}$

2. a) $1 \frac{11}{20}$  
b) $1 \frac{4}{7}$  
c) $2 \frac{17}{24}$  
d) $-3 \frac{4}{5}$

3. a) $3 \frac{2}{5}$  
b) $\frac{251}{280}$  
c) $\frac{1}{8}$  
d) $1 \frac{1}{5}$
All the questions in this chapter relate to topics in the textbook. As this completes the academic year it is advised to make maximum use of the revision exercises. A specimen examination paper is included here (after the answers to the exercises). In view of the fact that some students may have access to this Teaching Guide, it is recommended that some changes are made.

ANSWERS

Exercises

EX 30A

1. a) [Allow 6.2 to 6.4 cm]
2. a) 19 
   b) 11
   c) 16
   d) 7
3. a) 1.6 kg
   b) 4.5 kg
   c) 9.5 kg
   d) 250 g
4. (a) 
   (c) 
   (b) 
   (d)
5. a) 825 840 900
   b) 800 900
   c) 800 850 900
   d) 800 825 850 900
6. a) $5p$
   b) $3q$
   c) $4.5r$
   d) $1.8t$
7. Group A: median = 138.5 cm, range = 6 cm
   Group B: median = 138.5 cm, range = 10 cm
   The heights of the two groups of boys are the same in general, but there is more variation in group B.
8. a) Rs 14
   b) 0.7 kg
   c) 6 years
   d) 30 m
9. a) 10.5
   b) 4.5
   c) 287.4
   d) 35.2
EX 30B

1. 6:7

2. a) Urdu 65%  
    b) Geog 10%  
    c) 50 marks  
    d) English

3. a) 0.49  
    b) 0.56  
    c) 0.07  
    d) 0.134

4. a) square  
    b) concave kite  
    c) trapezium  
    d) rectangle

5. a) 2.4  
    b) 0.7  
    c) 5.1  
    d) 4.1

6. a) Rise of 0.5 m  
    b) Drop of 3.5 m  
    c) Drop of 4 m  
    d) Drop of 3 m

7. a) \(2n + 4\)  
    b) \(4n - 2\)  
    c) \(4(n + 2)\)  
    d) \(2(n - 4)\)

8. a) 1.8; 2  
    b) 10.5; 11  
    c) 3.6; 4  
    d) 203.01; 203

9. a) acute  
    b) obtuse  
    c) acute  
    d) obtuse  

[Accuracy to ± 1° allowed]

10. a) 5.772  
    b) 69.79  
    c) 575.6  
    d) 3145.5

EX 30C

1. a) 0  
    b) \(\frac{4}{7}\)

2. a) 7.339  
    b) 9.153  
    c) 1004  
    d) 17.95

3. a) 22 cm  
    b) 22 cm²
4. a) 12.13 b) 0.69 c) 0.525 d) 0.018
5. a) 6y 2 months b) 6y 3 months
c) 5y 11 months d) 5y 10 months
6. a) 22 b) 26 c) 56 d) \(8 \frac{2}{3}\)
7. 40 min
8. a) \(2 \frac{3}{4}\) b) \(1 \frac{3}{10}\) c) \(2 \frac{5}{9}\) d) \(1 \frac{2}{5}\)
9. a) \(8(n + 1)\) b) \(\frac{n - 1}{8}\) c) \(8n + 1\) d) \(\frac{n}{8} - 1\)
10. a) 1773 b) 125 c) 5619 d) 1050

**EX 30D**

1. 1.36 m
2. a) 0.29 b) 21.9 c) 3.8 d) 8.955
3. a) 70 b) 3.4 c) 1.8 d) 56
4. a) 6.7 b) 513 c) 35.4 d) 4130
5. a) \(3p + 2q\) b) \(4p + q\) c) \(2p^2q\) d) \(2p^2q^2\)
6. \(a = 80, b = 60, c = 120\)
7. a) 3200 boxes b) Rs 105
c) 15 tables d) 32 packets
8. a) [Diagram]
   b) parallelogram
   c) (0, 0)
d) no line symmetry
9. a) Ayaz Rs 8000, Bashir Rs 24 000, Currim Rs 40 000
   b) Ayaz Rs 9000, Bashir Rs 27 000, Currim Rs 36 000
   c) Ayaz Rs 12 000, Bashir Rs 18 000, Currim Rs 42 000
d) Ayaz Rs 14 400, Bashir Rs 28 800, Currim Rs 28 800
10.  a) 2  b) 2  c) 2  d) 3

**EX 30X**

1.  a) | × 70 | × 2 | × 72 |
    |-----|-----|-----|
    | 1   | 70  | 2   | 72  |
    | 2   | 140 | 4   | 144 |
    | 3   | 210 | 6   | 216 |
    | 4   | 280 | 8   | 288 |
    | 5   | 350 | 10  | 360 |
    | 6   | 420 | 12  | 432 |
    | 7   | 490 | 14  | 504 |
    | 8   | 560 | 16  | 576 |
    | 9   | 630 | 18  | 648 |
    | 10  | 700 | 20  | 720 |

b)  $100 \times 72 + 40 \times 72 + 3 \times 72$
    $= 7200 + 2880 + 216$
    $= 10296$

c)  $2018 \times 72$
    $= 2000 \times 72 + 10 \times 72 + 8 \times 72$
    $= 144000 + 720 + 576$
    $= 145296$

d)  $1015 \times 72$
    $= 1000 \times 72 + 10 \times 72 + 5 \times 72$
    $= 72000 + 720 + 360$
    $= 73080$

2.  a)  $2^6 \times 3^2 \times 5^2$
    b)  $2^6 \times 5^6$
    c)  $2 \times 3 \times 5 \times 7 \times 11 \times 13 \times 17$
    d)  $2^2 \times 3^2 \times 5 \times 7 \times 11 \times 13$

3.  a)  3y 3 months 9 days
    b)  Wednesday
Specimen Examination Paper
[for final year-end assessment]

Instructions
The test is 1 hour long.
You must not use a calculator.
You will need: pen, pencil, ruler, rubber.
Try to answer all the questions.
Check your work carefully.
The marks for each question are shown in brackets

[Full marks = 100]

1. Write down the answers:
   a) $55 + 83 = $  
   b) $76 - 42 = $ 
   c) $4.7 + 8.4 = $ 
   d) $7.5 - 3.9 = $ 

2. Write down the answers:
   a) $247 \times 10 = $  
   b) $8.3 \times 4 = $ 
   c) $98.4 \div 8 = $  
   d) $470 \div 100 = $ 

3. Calculate the total area of the L-shape (in cm$^2$):

4. Share Rs 1498 between Ahmed and Bilal in the ratio 4:3. 

5. How many weeks are there from 3rd April to 5th June?
6. Mark any lines or centres of symmetry on these diagrams:  
   (a) rectangle  
   (b) kite

7. Find the HCF and LCM of 24 and 42.

8. Calculate the sale price of a software download. Normally it costs $35 but 15% discount has been offered.

9. What are the output values of this arrow diagram?

10. A bucket of water holds 4.5 l when full. The bucket itself weighs 420 g. What is the total weight of the full bucket?

11. Work out the value of $a$, $b$, and $c$:

   \[
   \begin{align*}
   a^\circ & = 124^\circ \\
   b^\circ & = 88^\circ \\
   c^\circ & = \text{(not to scale)}
   \end{align*}
   \]
12. After working these out on a calculator, how could I check my answers? 
State a different method of checking for each.

a) 3.6 + 17.4 + 0.18 + 16.471 + 0.72 + 12.6 + 3 =

b) (9.73 – 1.87) ÷ (0.9 + 2.8) =

c) 23.72 × 0.9 =

d) 1.032 × 2.5 =

13. a) How many faces has a cube? 

b) How many edges has a triangular prism?

c) How many vertices has a pyramid on a square base?

14. The graph shows the numbers of students who reached various levels in a 
swimming club.

<table>
<thead>
<tr>
<th>Swimming level</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
</tr>
</thead>
<tbody>
<tr>
<td>f</td>
<td>0</td>
<td>5</td>
<td>10</td>
<td>15</td>
<td>20</td>
<td>25</td>
<td>30</td>
<td>35</td>
<td></td>
</tr>
</tbody>
</table>

a) What is the mode?

b) How many students had not reached level 5?

c) How many students are there in this club altogether?

d) What is the ratio of level 4 to level 5 swimmers?
15. Find the value of  
   a) $7 + 14 \div 7$  
   b) $3 \times 8 + 2 \times 2$  
   c) $7.5 \ (26 - x)$ when $x = 24$  
   d) $\frac{n}{2} + 5n - 3$ when $n = 0.2$  

16. Write a sentence containing the words MEDIAN and RANGE comparing two groups of data from six students:  

<table>
<thead>
<tr>
<th>Test marks in English</th>
<th>6</th>
<th>8</th>
<th>7</th>
<th>5</th>
<th>8</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Test marks in Maths</td>
<td>7</td>
<td>3</td>
<td>5</td>
<td>9</td>
<td>8</td>
<td>7</td>
</tr>
</tbody>
</table>

17. How long is it  
   a) from seven o’clock to 08 18?  
   b) from 9 46 to twelve minutes past ten?  
   c) from quarter to five, to 6 30?  
   d) from five to twelve (noon) to 3 30 pm?  

18. Calculate:  
   a) $\frac{2}{3} + \frac{1}{2} =$  
   b) $\frac{4}{5} - \frac{1}{3} =$  
   c) $2 \frac{1}{2} + 1 \frac{2}{5} =$  
   d) $4 \frac{1}{3} - 1 \frac{3}{4} =$  

19. A bag contains 1 red ball, 7 white balls, 8 blue balls, and 9 green balls. If one is chosen at random, what is the probability it is  
   a) red?  
   b) white?  
   c) not blue?  
   d) pink?  
   (decimal answers)  

20. Work out:  
   a) $0.814 \div 0.2 =$  
   b) $4.6 \times 7.3 =$  
   c) $271.6 + 2.4 - 1.08 =$  
   d) $10.01 \div 0.07 =$
Answers and mark scheme:

1. a) 138  
   b) 34  
   c) 13.1  
   d) 3.6

   [1 mark each = 4]

2. a) 2470  
   b) 33.2  
   c) 12.3  
   d) 4.7 (or 4.70)

   [1 mark each = 4]

3. Either  
   $7 \times 2.5 + 4 \times 2$  
   $= 17.5 + 8$  
   $= 25.5 \text{ cm}^2$

   or  
   $2 \times 1.5 + 9 \times 2.5$  
   $= 3 + 22.5$  
   $= 25.5 \text{ cm}^2$

   [correctly dividing area 1; area of rectangle 1 each; Total 1 = 4]

4. $1498 \div 7 = 214$
   Ahmed $4 \times 214 = Rs 856$
   Bilal $3 \times 214 = Rs 642$

   [2 month-wise breakup; 2 answers = 4]

5. April 30 – 3 = 27 days
   May 31
   June 1 – 5

   $63 = 9 \text{ weeks}$

   [2 month-wise breakup; 2 answers = 4]

6. a)  
   b)  

   [2 each = 4]

7. $24 = 2^3 \times 3$
   $42 = 2 \times 3 \times 7$
   $\text{HCF} = 2 \times 3 = 6$
   $\text{LCM} = 2^3 \times 3 \times 7 = 168$

   [1] &= 4
8. 10% is $3.50
    5% is $1.75
    15% is $5.25 discount
    Sale price is 35 - 5.25 = $ 29.75

9. a) 16   b) 20   c) 24   d) 4(n + 3)  [1 each = 4]

10. 4.5 l weighs 4.5 kg water
    bucket 0.420
    \[
    \begin{align*}
    \text{weight of water} & = 4.920 \text{ kg} \\
    \text{(or 4.92)} & \\
    \text{answer} & = 4
    \end{align*}
    \]

11. \[a = 56 \ b = 36 \ c = 144\]  [2 each = 6]

12. a) Add the list in reverse order.  
    b) Estimate by rounding off first. Approx ans. = 2
    c) Check digits add up to multiple of 9.
    d) Check last 2 digits for multiple of 25.

13. a) 6   b) 9   c) 5  [2 each = 6]

14. a) level 4  
    b) 75 students  
    c) 115 students  
    d) 3:2  [2 + 1 + 2 + 1 = 6]

15. a) 9  
    b) 28  
    c) 15  
    d) -1.9  [1 + 1 + 1 + 3 = 6]

16. The median test mark in Maths is higher than the median for English, and the range for Maths is much greater.  [3 median + 3 range = 6]

12. a) 1 h 18 min  (or 68 min)  
    b) 26 min  
    c) 1 h 45 min  (or 1 \(\frac{3}{4}\) hour)  
    d) 3 h 35 min  

18. a) \(\frac{11}{6}\)  
    b) \(\frac{7}{15}\)  
    c) \(\frac{9}{10}\)  
    d) \(\frac{7}{12}\)  [1 + 1 + 2 + 2 = 6]

19. a) 0.04  
    b) 0.28  
    c) 0.68  
    d) 0  [1 + 2 + 2 + 1 = 6]

20. a) 4.07  
    b) 33.58  
    c) 272.92  
    d) 143  [1 + 2 + 2 + 1 = 6]
